Contents

1 Haar Integration **1**

1.1 Topological Groups 1

1.2 Locally Compact Groups 6

1.3 Haar Measure 8

1.4 The Modular Function 17

1.5 The Quotient Integral Formula 21

1.6 Convolution 25

1.7 The Fourier Transform 29

1.8 Exercises 30

2 Banach Algebras **33**

2.1 Banach Algebras 33

2.2 The Spectrum $\sigma_{\mathcal{A}}(a)$ 37

2.3 Adjoining a Unit 41

2.4 The Gelfand Map 43

2.5 Maximal Ideals 47

2.6 The Gelfand-Naimark Theorem 49

2.7 The Continuous Functional Calculus 54

2.8 Exercises and Notes 58

3 Duality for Abelian Groups **63**

3.1 The Dual Group 63
3.2 The Fourier Transform 67
3.3 The C^*-Algebra of an LCA-Group 69
3.4 The Plancherel Theorem 72
3.5 Pontryagin Duality 78
3.6 The Poisson Summation Formula 83
3.7 Exercises and Notes 86

4 The Structure of LCA-Groups 91
4.1 Connectedness 91
4.2 The Structure Theorems 95
4.3 Exercises 107

5 Operators on Hilbert Spaces 109
5.1 Functional Calculus 109
5.2 Compact Operators 115
5.3 Hilbert-Schmidt and Trace Class 119
5.4 Exercises 124

6 Representations 127
6.1 Schur's Lemma 127
6.2 Representations of $L^1(G)$ 131
6.3 Exercises 135

7 Compact Groups 139
7.1 Finite Dimensional Representations 139
7.2 The Peter-Weyl Theorem 141
7.3 Isotypes 145
7.4 Induced Representations 148

7.5 Representations of SU(2) 150
7.6 Exercises 156

8 Direct Integrals **159**
8.1 Von Neumann Algebras 159
8.2 Weak and Strong Topologies 160
8.3 Representations 162
8.4 Hilbert Integrals 165
8.5 The Plancherel Theorem 167
8.6 Exercises 169

9 The Selberg Trace Formula **171**
9.1 Cocompact Groups and Lattices 171
9.2 Discreteness of the Spectrum 174
9.3 The Trace Formula 179
9.4 Locally Constant Functions 185
9.5 Exercises and Notes 186

10 The Heisenberg Group **189**
10.1 Definition 189
10.2 The Unitary Dual 190
10.3 The Plancherel Theorem for $\mathcal{H}$ 195
10.4 The Standard Lattice 196
10.5 Exercises and Notes 199

11 $\mathrm{SL}_2(\mathbb{R})$ **201**
11.1 The Upper Half Plane 201
11.2 The Hecke Algebra 205
11.3 An Explicit Plancherel Theorem 214

11.4 The Trace Formula 216
11.5 Weyl's Asymptotic Law 222
11.6 The Selberg Zeta Function 225
11.7 Exercises and Notes 229

12 Wavelets **233**

12.1 First Ideas 233
12.2 Discrete Series Representations 239
12.3 Examples of Wavelet Transforms 246
12.4 Exercises and Notes 255

A Topology **259**

A.1 Generators and Countability 260
A.2 Continuity 261
A.3 Compact Spaces 262
A.4 Hausdorff Spaces 264
A.5 Initial- and Final-Topologies 265
A.6 Nets 267
A.7 Tychonov's Theorem 271
A.8 The Lemma of Urysohn 273
A.9 Baire Spaces 275
A.10 The Stone-Weierstraß Theorem 276

B Measure and Integration **281**

B.1 Measurable Functions and Integration 281
B.2 The Riesz Representation Theorem 285
B.3 Fubini's Theorem 287
B.4 $\boldsymbol{L^p}$-Spaces and the Riesz-Fischer Theorem 291

B.5 The Radon-Nikodym Theorem 296
B.6 Vector-Valued Integrals 297

C Functional Analysis **305**
C.1 Basic Concepts 305
C.2 Seminorms 311
C.3 Hilbert Spaces 313
C.4 Unbounded Operators 316

Bibiliography **323**

Index **329**
