## PART I: COX MODELS, ANALYSES, AND EXTENSIONS

### **1 Extended Cox and Accelerated Models in Reliability, with General Censoring and Truncation** **3**

*C. Huber-Carol and M. Nikulin*

1.1 Cox Model and Extensions	3
1.1.1 The simple Cox model	3
1.1.2 Nonhomogeneity in chronological time	4
1.1.3 Effect not constant in time	5
1.1.4 Omitted pertinent covariate: frailty models	5
1.2 General Censoring and Truncations	6
1.2.1 Definition	6
1.2.2 Maximum likelihood estimation for frailty models	7
1.3 Discrete Time: Logistic Regression Models for the Retro-Hazard	8
1.4 Accelerated Failure Time Models (AFT)	9
1.4.1 Sedyakin principle	10
1.4.2 Definition of AFT models	10
1.4.3 Relationships between accelerated (AFT) and proportional hazard (PH) models	11
1.4.4 Relationships between Sedyakin and PH: MPH models	12
1.4.5 Generalized PH models (GPH) on $\mathcal{E}$	12
1.4.6 General models	13
1.4.7 Modeling and homogeneity problem	13
1.5 Correlated Survivals	15
1.5.1 Introduction	15

1.5.2 Model in discrete time: Hierarchical dependencies	16
1.5.3 Definition of the models	16
1.5.4 Regression model	17
1.5.5 Estimation	17
References	18
<b>2 Corrected Score Estimation in the Cox Regression Model with Misclassified Discrete Covariates</b>	<b>23</b>
<i>D. M. Zucker and D. Spiegelman</i>	
2.1 Introduction	24
2.2 Review of the Corrected Score Technique	25
2.3 Application to the Cox Survival Model	26
2.3.1 Setup	26
2.3.2 The method	27
2.4 Example	29
References	31
<b>3 A Varying-Coefficient Hazards Regression Model for Multiple Cross-Effect</b>	<b>33</b>
<i>H-D. I. Wu</i>	
3.1 Introduction	33
3.2 Illustration of the Piecewise-Constant Model	35
3.3 Estimation Under the Piecewise-Constant Setting	36
3.4 The Tests	37
3.4.1 Some specific tests	37
3.5 Data Analysis	39
3.6 Discussion	41
References	42
<b>4 Closure Properties and Diagnostic Plots for the Frailty Distribution in Proportional Hazards Models</b>	<b>43</b>
<i>P. Economou and C. Caroni</i>	
4.1 Introduction	43
4.2 Closure Properties of the Individual Frailty Distribution	44
4.3 Diagnostic Plots	47
4.4 Application	48
4.5 Shared Frailty	49
References	53
<b>5 Multivariate Survival Data with Censoring</b>	<b>55</b>
<i>S. Gross and C. Huber-Carol</i>	
5.1 Introduction	55

5.2	Definition of the Models	56
5.2.1	Bivariate continuous model	56
5.2.2	Generalization to $p$ components	56
5.2.3	Properties of the bivariate family	57
5.2.4	General bivariate model	57
5.2.5	The purely discrete model	58
5.2.6	Simple examples of laws of type (5.1)	58
5.3	Some Usual Bivariate Models	59
5.3.1	Clayton bivariate distribution	59
5.3.2	Marshall-Olkin bivariate distribution	60
5.3.3	Our quasi-Marshall-Olkin bivariate distribution	61
5.3.4	Gumbel bivariate distribution	61
5.4	NPML Estimation	62
5.4.1	Likelihood for the bivariate case	62
5.4.2	NPML estimation	62
5.5	Concluding Remarks	64
	References	64

## PART II: RELIABILITY THEORY—DEGRADATION MODELS

### **6 Virtual (Biological) Age Versus Chronological Age** **69** *M. Finkelstein*

6.1	Introduction	69
6.2	The Black Box Virtual Age	71
6.3	Information-Based Virtual Age	73
6.3.1	Degradation curve	73
6.3.2	Mean remaining lifetime	75
6.4	Virtual Age in a Series System	77
6.5	Concluding Remarks	80
	References	80

### **7 A Competing Risks Model for Degradation and Traumatic Failure Times** **83** *V. Couallier*

7.1	Introduction	83
7.2	The Degradation Failure—Estimation of $F_A$ and $F_{T_0}$	84
7.3	A Joint Model with Both Degradation and Traumatic Failure Times	87
7.4	A Joint Model with Two Failure Modes	90
7.5	Conclusion	91
	References	92

<b>8 Generalized Birth and Death Processes as Degradation Models</b>	<b>95</b>
<i>V. Rykov</i>	
8.1 Introduction and Motivation	95
8.2 Generalized B&D Process. Preliminary	96
8.3 Steady-State Distribution	98
8.4 Conditional Distribution Given Lifetime	99
8.5 An Example	103
8.6 Conclusion	106
References	106
<b>9 Nonperiodic Inspections to Guarantee a Prescribed Level of Reliability</b>	<b>109</b>
<i>C. T. Barker and M. J. Newby</i>	
9.1 Introduction	109
9.2 The Model	110
9.2.1 The considered processes	110
9.2.2 Maintenance actions and nonperiodic inspections	111
9.2.3 Features of the model	114
9.3 Expected Total Cost	116
9.3.1 Expression of the expected total cost	117
9.3.2 Obtaining the solutions	118
9.4 Numerical Results and Comments	120
9.5 Conclusion	123
Appendix	124
References	125
<b>10 Optimal Incomplete Maintenance for Weibull Failure Processes</b>	<b>127</b>
<i>W. Kahle</i>	
10.1 Introduction	127
10.2 Kijima-Type Repairs	128
10.3 Parameter Estimation	129
10.4 Optimal Maintenance as Time Scale Transformation	131
10.5 Conclusion	135
References	135
<b>11 Are Nonhomogeneous Poisson Process Models Preferable to General-Order Statistics Models for Software Reliability Estimation?</b>	<b>137</b>
<i>S. Kundu, T. K. Nayak, and S. Bose</i>	
11.1 Introduction	137

11.2 Connections Between NHPP and GOS Models 140  
 11.3 Some Aspects of Inference 142  
 11.4 Simulation Results 143  
 11.5 Discussion 149  
 References 150

**12 Multistate System Reliability Assessment by Using the Markov Reward Model 153**

*A. Lisnianski, I. Frenkel, L. Khvatskin, and Y. Ding*

12.1 Introduction 153  
 12.2 Model Description 154  
     12.2.1 Generalized MSS reliability measure 154  
     12.2.2 Markov reward model: General description 155  
     12.2.3 Rewards determination for MSS reliability computation 156  
 12.3 Numerical Example 157  
 12.4 Conclusions 166  
 References 167

PART III: INFERENCE ANALYSIS

**13 Asymptotic Certainty Bands for Kernel Density Estimators Based upon a Bootstrap Resampling Scheme 171**

*P. Deheuvels and G. Derzko*

13.1 Introduction and Results 171  
 13.2 An Example of Application 177  
 13.3 Proofs 182  
     13.3.1 Proof of Theorem 13.1.1 182  
 References 185

**14 Estimation of Rescaled Distribution 187**

*H. Lauter, M. Nikulin, and V. Solev*

14.1 Introduction 187  
 14.2 Transportation Metric 188  
 14.3 Entropy, Duality of Metric Entropy 189  
 14.4 Expectation of  $\kappa_{\mathcal{G}}(P, P_n)$  191  
 14.5 Minimum Distance Estimator 193  
 14.6 Empirical Process, Concentration Inequality 195  
 14.7 The Main Result 196  
 References 198

<b>15</b>	<b>Nested Plans for Sequential Change Point Detection—The Parametric Case</b>	<b>199</b>
	<i>P. Feigin, G. Gurevich, and Y. Lumelskii</i>	
15.1	Introduction and Notation	199
15.2	Definitions and Characteristics of Nested Plans	200
15.3	Multivariate Normal Distributions and Optimal Nested Plans	201
15.4	Nested Plans for One-Parameter Exponential Distributions	204
15.5	Numerical Examples and Comparisons	206
	References	211
<b>16</b>	<b>Sampling in Survival Analysis and Estimation with Unknown Selection Bias and Censoring</b>	<b>213</b>
	<i>A. Guilloux</i>	
16.1	Introduction	213
16.2	Sampling in the Lexis Diagram	215
16.2.1	Modeling the Lexis diagram	215
16.2.2	Censored observations	217
16.3	Inference for the Distribution of the r.v. $X$	218
16.4	Inference for the Weight Function $w$	219
16.5	Simulation Study	220
	References	223
<b>17</b>	<b>Testing the Acceleration Function in Lifetime Models</b>	<b>225</b>
	<i>H. Liero and M. Liero</i>	
17.1	Introduction	225
17.2	The Parametric ALT Model	226
17.3	The ALT Model with Nonparametric Baseline Distribution	229
17.4	The ALT Model with Parametric Baseline Distribution and Nonparametric Acceleration Function	231
17.5	The Nonparametric ALT Model	236
	References	238
<b>18</b>	<b>Recent Achievements in Modified Chi-Squared Goodness-of-Fit Testing</b>	<b>241</b>
	<i>V. Voinov, R. Alloyarova, and N. Pya</i>	
18.1	Introduction	241
18.2	A Contemporary Status of the Theory of Modified Chi-Squared Tests	244

18.3	Some Recent Results	248
18.3.1	Testing for normality	248
18.3.2	Testing for the logistic probability distribution	249
18.3.3	Testing for the three-parameter Weibull null hypothesis	250
18.3.4	Testing for the power-generalized Weibull family	251
18.4	Conclusion	252
	Appendix	253
	References	255

## **19 Goodness-of-Fit Tests for Pareto Distribution** **259**

*S. Gulati and S. Shapiro*

19.1	Introduction	259
19.2	Type I Pareto Distribution	262
19.3	Test for the Type I Pareto Distribution	262
19.4	Power Study	264
19.5	Type II Pareto Distribution	265
19.6	Null Distribution of the Proposed Procedure and Power Study	268
19.7	Power of the Proposed Procedure	269
19.8	Examples	271
19.9	Conclusions	271
	References	272

## **20 Application of Inverse Problems in Epidemiology and Biodemography** **275**

*A. Michalski*

20.1	Introduction	275
20.2	Definition and Solution of Inverse Problem	277
20.3	Estimation on Incomplete Follow-Up	280
20.4	Estimation of HIV Infection Rate on the Dynamics of AIDS Cases	282
20.5	Estimation of Survival in the Wild	285
	References	288

### PART IV: ANALYSIS OF CENSORED DATA

## **21 A Sampling-Based Chi-Squared Test for Interval-Censored Data** **295**

*M. L. Calle and G. Gómez*

21.1	Introduction	295
21.2	Johnson's Bayesian Chi-Squared Statistic	296

21.3	Sampling-Based Chi-Squared Test for Interval-Censored Data	298
21.3.1	Iterative algorithm	299
21.3.2	Asymptotic properties	299
21.3.3	Decision criteria	302
21.4	Simulation Study	303
21.5	Discussion	304
	References	305
<b>22</b>	<b>Semiparametric Regression Models for Interval-Censored Survival Data, With and Without Frailty Effects</b>	<b>307</b>
	<i>P. Hougaard</i>	
22.1	Introduction	308
22.2	Parametric Models	309
22.3	Nonparametric Models	309
22.4	Proportional Hazards Models	311
22.5	Conditional Proportional Hazards (Frailty Model)	312
22.6	Extensions	313
22.7	Conclusion	316
	References	316
<b>23</b>	<b>Exact Likelihood Inference for an Exponential Parameter Under Progressive Hybrid Censoring Schemes</b>	<b>319</b>
	<i>A. Childs, B. Chandrasekar, and N. Balakrishnan</i>	
23.1	Introduction	319
23.2	Results for Type-I Progressive Hybrid Censoring	320
23.3	Results for Type-II Progressive Hybrid Censoring	326
23.4	Examples	328
	References	330
PART V: QUALITY OF LIFE		
<b>24</b>	<b>Sequential Analysis of Quality-of-Life Measurements Using Mixed Rasch Models</b>	<b>333</b>
	<i>V. Sébille, J.-B. Hardouin, and M. Mesbah</i>	
24.1	Introduction	334
24.2	IRT Models	335
24.2.1	The Rasch model	336
24.2.2	Estimation of the parameters	336
24.3	Sequential Analysis	336
24.3.1	Traditional sequential analysis	336
24.3.2	Sequential analysis based on Rasch models	337
24.3.3	The triangular test	339

24.4 Simulations	339
24.4.1 Simulation design	339
24.4.2 Results	340
24.5 Discussion—Conclusion	342
References	345
<b>25 Measuring Degradation of Quality-of-Life Related to Pollution in the SEQAP Study</b>	<b>349</b>
<i>S. Deguen, C. Segala, and M. Mesbah</i>	
25.1 Introduction	349
25.2 Material and Methods	350
25.2.1 Finding questions, using previous knowledge, and focus groups	350
25.2.2 Selecting questions, using a real sample, and psychometric methods	350
25.2.3 From principal component analysis to Cronbach alpha curves	351
25.2.4 Modern measurement models and graphical modeling	353
25.3 Results	354
25.3.1 Rotated principal component analysis	355
25.3.2 Backward Cronbach alpha curve	356
25.3.3 Scoring procedure	356
25.3.4 Correlation items to scores	356
25.3.5 Rasch model	358
25.3.6 External validation	359
25.4 Discussion	360
Appendix	361
References	367
<b>26 A Bayesian Ponders “The Quality of Life”</b>	<b>369</b>

26.1 Introduction and Overview	369
26.1.1 Selective quotations on QoL	370
26.1.2 Overview of this chapter	371
26.2 The Three-Party Architecture	372
26.3 The Rasch Model for $\mathcal{P}$ s Input to QoL	374
26.3.1 The case of a single dimension: $\mathcal{D}$ 's assessment of $\theta_j$	375
26.4 The Case of Multiple Dimensions: Fusing Information	376
26.4.1 $\mathcal{D}$ 's assessment of $\theta(\mathcal{D})$	376
26.4.2 Encoding the positive dependence between the $\theta_j$ s	377

26.5 Defining the Quality of Life	378
26.6 Summary and Conclusions	379
References	380

PART VI: INFERENCE FOR PROCESSES

<b>27 On the Goodness-of-Fit Test for Some Continuous Time Processes</b>	<b>385</b>
<i>S. Dachian and Y. A. Kutoyants</i>	
27.1 Introduction	385
27.2 Diffusion Process with Small Noise	388
27.3 Ergodic Diffusion Processes	390
27.4 Poisson and Self-Exciting Processes	395
27.5 Simulation	400
References	402
<b>28 Nonparametric Estimation of Integral Functionals for Semi-Markov Processes with Application in Reliability</b>	<b>405</b>
<i>N. Limnios and B. Ouhbi</i>	
28.1 Introduction	405
28.2 The Semi-Markov Setting	406
28.3 Integral Functionals	409
28.4 Nonparametric Estimation of Moments	410
28.5 Confidence Intervals for the Moments	414
28.6 Numerical Application	415
References	416
<b>29 Estimators for Partially Observed Markov Chains</b>	<b>419</b>
<i>U. U. Müller, A. Schick, and W. Wefelmeyer</i>	
29.1 Introduction	419
29.2 Nonparametric Estimators	420
29.2.1 Full Observations	420
29.2.2 Periodic Skipping	421
29.2.3 Observing Two Out of Three	421
29.2.4 Random Skipping	424
29.2.5 Skipping at Random	424
29.3 Linear Autoregression	425
29.3.1 Full Observations	425
29.3.2 Observing One Out of Two	426
29.3.3 Higher Lags	428
29.3.4 Higher Order Autoregression	429
References	432

**30 On Solving Statistical Problems for the Stochastic Processes by the Sufficient Empirical Averaging Method** 435  
*A. Andronov, E. Chepurin, and A. Hajiyeu*

- 30.1 Introduction 435
- 30.2 Base Model 436
- 30.3 On a Class of Processes with the Complete Sufficient Statistics for the Plans of *A*-Type 437
- 30.4 On Complete Sufficient Statistics for a Class of Labeled Processes with the Plans of *B*-Type 439
- 30.5 On Procedures of Data Variant Generation 440
- 30.6 Numerical Examples 441
