## Contents

<b>Preface</b> .....	VII
<b>List of Figures</b> .....	XIII
<b>List of Tables</b> .....	XV
<b>1 Introduction</b> .....	1
1.1 Quality of Service .....	3
1.2 Network Utilisation .....	5
1.3 Traffic Management .....	10
1.4 Queue Analysis .....	12
1.5 Summary .....	17
<b>2 Fundamentals of the J Programming Language</b> .....	19
2.1 Data Objects .....	19
2.2 J Verbs .....	21
2.3 Monadic and Dyadic functions .....	22
2.4 Positional Parameters .....	23
2.5 Adverbs .....	27
2.6 Rank, Shape and Arrays .....	28
2.7 Summary .....	32

<b>3</b>	<b>Programming in J</b> .....	33
3.1	Verb Composition .....	35
3.1.1	Hooks .....	35
3.1.2	Forks .....	36
3.1.3	Longer Phrases .....	36
3.1.4	Conjunctions .....	37
3.2	Examples .....	41
3.2.1	More $z$ -transforms .....	42
3.2.2	Shannon's Result .....	43
3.2.3	Euler's Formula .....	43
3.2.4	Information Entropy .....	44
3.3	Good Programming Practice .....	45
3.3.1	Locales .....	47
3.3.2	Explicit Programming .....	48
3.4	Scripts .....	49
3.5	Summary .....	50
<b>4</b>	<b>Network Calculus</b> .....	51
4.1	Characterising Traffic Flows .....	51
4.2	Min-Plus Algebra .....	54
4.3	Mathematical Background .....	58
4.3.1	Wide-Sense Increasing .....	59
4.3.2	Types of Wide-Sense Increasing Functions .....	59
4.3.3	Subadditive Functions .....	62
4.3.4	Subadditive Closure .....	63
4.3.5	Concavity and Convexity .....	64
4.3.6	Star Shaped Functions .....	65
4.4	Arrival Curves .....	66
4.5	Service Curves .....	71
4.5.1	Concatenation .....	71
4.5.2	Performance Bounds .....	72
4.6	Streaming Video Example .....	74
4.7	Effective Bandwidth and Equivalent Capacity .....	78
4.8	Summary .....	81

<b>5</b>	<b>Stochastic Processes and Statistical Methods</b> .....	83
5.1	Random Number Generators .....	83
5.2	Statistical Functions .....	87
5.2.1	Autocovariance and Autocorrelation .....	88
5.2.2	Variance Time Plot .....	90
5.2.3	Fourier Transform and Power Spectrum .....	92
5.3	Stochastic Processes .....	95
5.3.1	Autoregressive Processes .....	96
5.3.2	Moving Average Processes .....	99
5.3.3	Processes with Long-Memory .....	100
5.4	Queue Analysis .....	104
5.5	Summary .....	108
<b>6</b>	<b>Traffic Modeling and Simulation</b> .....	109
6.1	On/Off Traffic Sources .....	109
6.2	Binomial Distribution .....	110
6.3	Markov Models .....	112
6.4	Effective Bandwidth .....	115
6.5	Discrete On/Off Source Models .....	120
6.6	Summary .....	124
<b>7</b>	<b>Chaotic Maps</b> .....	125
7.1	Analysing Chaotic Behaviour .....	125
7.2	Chaotic Maps for Traffic Sources .....	134
7.2.1	Bernoulli Shift .....	136
7.2.2	Double Intermittency Map .....	140
7.2.3	Queue Dynamics .....	144
7.3	Summary .....	145
<b>8</b>	<b>ATM Quality of Service</b> .....	147
8.1	Generic Cell Rate Algorithm .....	148
8.2	Virtual Scheduling Algorithm and Leaky Bucket Algorithm .....	148
8.2.1	Jitter .....	152
8.3	Dual Virtual Scheduling Algorithm and Dual Leaky Bucket .....	153
8.4	Analysing Burst Tolerance .....	155
8.5	Summary .....	161

<b>9 Congestion Control</b> .....	163
9.1 A Simple Congestion Control Algorithm .....	164
9.2 Binomial Congestion Control Algorithms .....	166
9.2.1 Analysis .....	171
9.3 Model of TCP Congestion Control .....	176
9.3.1 Analysis .....	179
9.4 Summary .....	181
<b>Scripts</b> .....	183
A.1 Scripts from Chapter 3 .....	183
A.2 Scripts from Chapter 4 .....	185
A.3 Scripts from Chapter 5 .....	187
A.4 Scripts from Chapter 6 .....	193
A.5 Scripts from Chapter 7 .....	196
A.6 Scripts from Chapter 8 .....	198
A.7 Scripts from Chapter 9 .....	200
<b>Abbreviations</b> .....	205
<b>References</b> .....	207
<b>Index</b> .....	211
