Part I System Reliability Computing

1 Central Limit Theorem for a Family of Reliability Measures
Panlop Zeephongsekul 3
1.1 Introduction 3
1.2 Fuzzy Sets Concepts 4
1.2.1 Fuzzy Sets 4
1.2.2 Fuzzy Random Variables 7
1.2.3 Point Process with Random Fuzzy Marks and Corresponding Gauge Measure 9
1.2.4 Normal Fuzzy Random Variables 11
1.3 A Central Limit Theorem for Gauge Measures and Related Results 14
1.3.1 Central Limit Theorems 14
1.3.2 Asymptotic Variance 20
1.4 Further Examples and an Application 23
1.4.1 An Application 26
1.5 Conclusion 29
References 30

2 Modeling and Reliability Evaluation of Multi-state *k*-out-of-*n* Systems
Zhigang Tian, Wei Li, Ming J. Zuo 31
2.1 Introduction 31
2.1.1 Binary *k*-out-of-*n* Systems 31
2.1.2 Multi-state Systems 32
2.1.3 Overview of Multi-state *k*-out-of-*n* System Modeling and Evaluation 33
2.2 Multi-state *k*-out-of-*n* System Models 34

2.2.1 Multi-state *k*-out-of-*n*:G System Model by Huang *et al.* 34
2.2.2 Multi-state *k*-out-of-*n* System Model by Tian *et al.* 35
2.2.3 Multi-state Weighted *k*-out-of-*n* System Model 37
2.3 Reliability Evaluation of Multi-state *k*-out-of-*n* Systems 39
2.3.1 Fundamental Elements of Recursive Algorithms 40
2.3.2 Reliability Evaluation of the Multi-state *k*-out-of-*n* Model Defined by Huang *et al.* 40
2.3.3 Reliability Evaluation of the Multi-state *k*-out-of-*n* Model Defined by Tian *et al.* 44
2.3.4 Reliability Evaluation of Multi-state Weighted *k*-out-of-*n* Systems 48
2.4 Conclusions 54
References 54

3 On Weighted Least Squares Estimation for the Parameters of Weibull Distribution
Lifang Zhang, M. Xie, L.C. Tang 57
3.1 Introduction 57
3.2 Basic Concepts in Lifetime Data Analysis 59
3.3 Common Estimation Methods for Weibull Distribution 61
3.3.1 Weibull Probability Plot 61
3.3.2 Least Squares Estimation Method 63
3.3.3 Maximum Likelihood Estimation Method 64
3.3.4 Comparisons of the Methods 65
3.4 Weighted Least Squares Estimation Methods and Related Work 65
3.4.1 Estimating Equation of WLSE 65
3.4.2 Calculation of Weights and Assumptions 66
3.4.3 Related Work 66
3.5 An Improved Method for Calculating Weights 69
3.5.1 Calculation for 'Best' Weights 69
3.5.2 An Approximation for 'Best' Weights for Small and Complete Samples 72
3.5.3 Application Procedure 74
3.5.4 Numerical Example 75
3.5.5 Monte Carlo Study 75
3.6 Discussions 78
3.7 Conclusions 80
References 80

4 Periodic and Sequential Imperfect Preventive Maintenance Policies for Cumulative Damage Models
Toshio Nakagawa, Satoshi Mizutani 85
4.1 Introduction 85
4.2 Periodic PM 87

4.3 Sequential PM 90
4.4 PM for a Finite Interval 94
4.5 Conclusions 97
References 98

5 Some Alternative Approaches to System Reliability Modeling
Jerzy K. Filus, Lidia Z. Filus 101
5.1 Introduction 101
5.1.1 New Kinds of Stochastic Dependences 101
5.1.2 Joint Probability Distributions 102
5.1.3 Determination of pdfs 102
5.1.4 Application of Stochastic Dependences 103
5.2 A New Bivariate Probability Densities Construction 103
5.2.1 Modeling of Component Lifetime 103
5.2.2 Choice of Subclass of Continuous Functions 106
5.3 Multivariate Extensions of the Bivariate Models 108
5.4 A Comparison with Freund, Marshall and Olkin, and some Other Models 111
5.4.1 The Freund Model 111
5.4.2 The Marshall and Olkin Models 111
5.4.3 Classification of Stochastic Dependency Models 112
5.4.4 Physical Impacts Outside the System 112
5.4.5 "Third Type" Stochastic Dependence Models 112
5.5 The Transformation Method for the pdfs Construction 114
5.5.1 Direct Transformations of Random Vectors 114
5.5.2 On the Role of the Pseudoaffine and Pseudopower Transformations in Statistical Analysis and Sampling 115
5.6 Extension of the Random Vector Models to Stochastic Processes . . . 116
5.6.1 Discrete Time Interpretation 116
5.6.2 Stochastic Processes Memory 117
5.7 Application of *k*-Markovian Stochastic Processes 118
5.7.1 Finite Dimensional Pseudoaffine Transformations 119
5.7.2 Markovian Pseudonormal Processes 119
5.7.3 *k*-Markovianity for Pseudoaffine Transformations 120
5.8 Maintenance Models 122
5.8.1 Reliability and Maintenance of Systems 122
5.8.2 Aging Systems Repaired at Each Failure 124
5.8.3 "Forgetting Factors" Method 127
5.9 Additional Remarks 128
5.9.1 Extention of Class of Pseudoaffine Transformations 128
5.9.2 Extension of *n*-variate pdf Classes 129
5.9.3 Extended Applications of Stochastic Dependences 129
5.9.4 Multivariate Analysis 129
5.10 Some Analytic Examples 130
5.10.1 Pseudolinear Transformations 130

5.10.2 Further Analytic Calculations 131
5.10.3 Simplification of Calculations 132
5.10.4 An Example of a Non-symmetric Pseudonormal Class of pdfs 133
References 134

6 The Optimal Burn-in: State of the Art and New Advances for Cost Function Formulation
Xin Liu, Thomas A. Mazzuchi 137
6.1 Introduction 137
6.2 State-of-art on Optimal Burn-in Research 138
6.2.1 Failure Time Model 138
6.2.2 Inference 145
6.2.3 Model the Process 146
6.2.4 Model Optimization 152
6.3 Development of "After Burn-in Failure Treatment" (AFT) Cost Model 168
6.3.1 Why the New AFT Model? 168
6.3.2 New Cost Model Construction 169
6.3.3 Properties and Optimization of the New Model 171
6.3.4 Numerical Example 174
6.3.5 Application of AFT Model to Updating Strategy Policy Making 178
6.4 Conclusions 180
References 181

Part II Reliability Engineering in Design

7 Optimum Threshold Level of Degrading Systems Based on Sensor Observation
Elsayed A. Elsayed, Hao Zhang 185
7.1 Introduction 186
7.2 Gamma Process Degradation Model 187
7.3 Imperfect Maintenance Model 188
7.3.1 Maintenance Policy 188
7.3.2 Imperfect Maintenance Model 189
7.3.3 Modeling Maintenance Time 190
7.4 Sensor Errors and Accuracy 190
7.5 Uptime Modeling 193
7.6 Threshold Level: System Availability Maximization 194
7.6.1 Formulation of the Availability Maximization Problem 194
7.6.2 Numerical Example 195
7.7 Threshold Level: Maintenance Cost Minimization 196
7.7.1 Formulation of the Cost Minimization Problem 196
7.7.2 Numerical Example 197

7.8 Conclusions 198
References 198

8 Weibull Data Analysis with Few or no Failures
Ming-Wei Lu, Cheng Julius Wang 201
8.1 Introduction 201
8.2 Theory 202
8.2.1 Nelson's Method [1] 202
8.2.2 Extended Test Method [3] 203
8.3 Examples 203
8.4 Simulation Study with Only Three Failures 206
8.4.1 Weibull Parameter Estimation Method 208
8.5 Conclusions 209
References 210

9 A Load-weighted Statistical Average Model of Fatigue Reliability
Liyang Xie, Zheng Wang 211
9.1 Introduction 211
9.2 Statistical Average Interpretation of SSI Model 213
9.3 A Statistical Load-weighted Average Model of Fatigue Reliability . . 215
9.4 Fatigue Life Distribution Under Constant Amplitude Cyclic Stress and Fatigue Reliability Calculation 218
9.5 Examples of Application 220
9.6 Conclusions 223
References 224

10 Markovian Performance Evaluation for Software System Availability with Processing Time Limit
Masamitsu Fukuda, Koichi Tokuno, Shigeru Yamada 225
10.1 Introduction 225
10.2 Markovian Software Availability Model 226
10.2.1 Model Description 226
10.2.2 Software Availability Measures 227
10.3 Model Analysis 229
10.4 Derivation of Software Performance Measures 232
10.5 Numerical Examples 234
10.6 Concluding Remarks 237
References 238

11 Failure Probability Estimation of Long Pipeline
Liyang Xie, Zheng Wang, Guangbo Hao, Mingchuan Zhang 239
11.1 Introduction 239
11.2 Segment Partition and System Strength Distribution 240
11.3 Pipeline Failure Probability Estimation and Failure Dependence Analysis 244

11.4 Pipeline Failure Probability Estimation 245
11.5 Upper Limit of Large-scale Series System Failure Probability 246
11.6 Pipeline Reliability Under Randomly Repeated Load 248
11.7 Conclusion 250
References 251

Part III Software Reliability and Testing

12 Software Fault Imputation in Noisy and Incomplete Measurement Data
Andres Folleco, Taghi M. Khoshgoftaar, Jason Van Hulse 255
12.1 Introduction 255
12.2 Empirical Datasets 256
12.2.1 CCCS Dataset Description 256
12.2.2 Inherent and Simulated Noise 257
12.2.3 Relatively Clean CCCS Dataset 258
12.3 Imputation Techniques 258
12.3.1 Regression Imputation 258
12.3.2 REPTree Decision Tree Imputation 259
12.3.3 Nearest Neighbor Imputation 259
12.3.4 Mean Imputation 259
12.3.5 Bayesian Multiple Imputation 259
12.4 Missing Data Mechanisms 261
12.5 Experimental Design 262
12.5.1 Injection of Missing Data 262
12.5.2 BMI Experimental Settings 263
12.5.3 Imputation Performance Metric 263
12.6 Statistical Analysis 264
12.6.1 Imputation Average Absolute Errors (***aae***) 264
12.6.2 Three-way ANOVA: Randomized Complete Block Design 266
12.6.3 Multiple Pairwise Comparisons 267
12.6.4 Noise Impact on Remaining (Non-noisy) Instances 269
12.7 Conclusion 271
References 273

13 A Linearized Growth Curve Model for Software Reliability Data Analysis
Mitsuhiro Kimura 275
13.1 Introduction 275
13.2 Generalization of Growth Curve Models 276
13.2.1 Two-parameter Numerical Differentiation Method 277
13.2.2 Linearized Growth Curve Model 278
13.3 Parameter Estimation 280
13.4 Examples of Data Analysis and Discussion 281
13.4.1 Regression Analysis 281

13.4.2 Curve-fitting Analysis 287
13.5 Concluding Remarks 289
References 290

14 Software Reliability Model Considering Time-delay Fault Removal
Seheon Hwang, Hoang Pham 291
14.1 Introduction 291
14.2 Model Formulation 293
14.2.1 Time-delay Fault Removal Model 294
14.3 Numerical Examples 298
14.3.1 General Approach 298
14.3.2 Analysis of Performance of Models for Fitting Failure Data 301
14.3.3 Analysis of Performance for Predicting Future Failure 304
14.4 Concluding Remarks 305
References 305

15 Heuristic Component Placement for Maximizing Software Reliability
Michael W. Lipton, Swapna S. Gokhale 309
15.1 Introduction 309
15.2 Overview 310
15.2.1 Discrete Time Markov Chains (DTMCs) 310
15.2.2 Simulated Annealing 312
15.3 Analysis and Optimization Methodologies 313
15.3.1 Reliability Analysis 313
15.3.2 Reliability Optimization 315
15.4 Illustrations 317
15.4.1 Description of Applications 317
15.4.2 Analysis Methodology 320
15.4.3 Optimization Methodology 322
15.5 Related Research 328
15.6 Conclusions and Future Research 328
References 329

16 Software Reliability Growth Models Based on Component Characteristics
Takaji Fujiwara, Shinji Inoue, Shigeru Yamada 331
16.1 Introduction 331
16.2 Module Composition 332
16.3 Software Reliability Growth Modeling 334
16.3.1 Basic SRGM Based on Component Characteristics 334
16.3.2 Generalization of BCC-SRGM 336
16.3.3 Parameter Estimation 338
16.4 Numerical Examples for Software Reliability Analysis 338
16.4.1 Estimation of Model Parameters 338

16.4.2 Goodness-of-fit Comparisons 339
16.5 Concluding Remarks 341
References 342

Part IV Quality Engineering in Design

17 Statistical Analysis of Appearance Quality for Automotive Rubber Products
Shigeru Yamada, Kenji Takahashi 345
17.1 Introduction 345
17.2 Description of Product and Defect Phenomenon 346
17.3 Identification of Bloom Phenomenon 347
17.4 Orthogonal Arrays 347
17.5 Analysis of Swell 349
17.5.1 Cumulative Method 349
17.5.2 Process Average and 95% Confidence Limits 350
17.6 Analysis of *CS* 351
17.6.1 Logit Transformation and Data Analysis 351
17.6.2 Process Average and 95% Confidence Limits 353
17.6.3 Process Average and 95% Confidence Limits Under Simultaneous Optimal Conditions of Swell and *CS* . . 353
17.7 Discriminant Analysis for Swell Measures 354
17.8 Multiple Regression Analysis for CS Measures 355
17.9 Concluding Remarks 360
References 360

18 Present Worth Design of Engineering Systems with Degrading Components
Young Kap Son, Gordon J. Savage 361
18.1 Introduction 361
18.2 Modeling of Time-variant Systems 363
18.2.1 Component Degradation 363
18.2.2 Time-variant Limit-state Functions 364
18.3 Cumulative Distribution Function Modeling 365
18.4 Formulation of Economic Design Problems 366
18.4.1 Present Worth Evaluation of Design 366
18.4.2 Formulation of Economic Design Problems 367
18.5 Case Study 368
18.5.1 Initial Design and CDF 370
18.5.2 New Designs 372
18.6 Conclusions 373
References 374

19 Economic-statistical Design of a Logarithmic Transformed S^2 EWMA Chart
P. Castagliola, G. Celano, S. Fichera 375
19.1 Introduction 375
19.2 Literature Review 376
19.3 The Logarithmic Transformed S^2 EWMA Chart 379
19.4 The Economic Design of the S^2 EWMA 384
19.4.1 Introduction 384
19.4.2 Formulation of the Mathematical Model 385
19.4.3 Computation of the ARLs for the S^2 EWMA 389
19.4.4 Formulation of the Constrained Optimization Problem 391
19.5 The Economic Statistical Design of the S^2 EWMA: a Numerical Analysis 392
19.5.1 Methodology 392
19.5.2 Evaluation of the Cost Savings vs. the S^2 Shewhart 393
19.5.3 A Sensitivity Analysis on the Design Parameters of the S^2 EWMA 399
19.6 Conclusions 403
References 404

20 Risk Management Techniques for Quality Software Development and Its Quantitative Evaluation
Toshihiko Fukushima, Shigeru Yamada 407
20.1 Introduction 407
20.2 Project Risk Management 409
20.2.1 Project Risks in Practice 409
20.2.2 Risk Management Activities 410
20.2.3 Risk Identification and Quantification 412
20.2.4 Risk Mitigation 412
20.2.5 Risk Monitoring and Control 413
20.3 Project Effect Analysis 415
20.3.1 Assumptions 415
20.3.2 Correlation Analysis 416
20.3.3 Multiple Linear Regression 416
20.3.4 Effectiveness Evaluation of Management Factor 419
20.4 Conclusions 420
References 420

Part V Application in Engineering Design

21 Recent Advances in Data Mining for Categorizing Text Records
W. Chaovalitwongse, H. Pham, S. Hwang, Z. Liang, C.H. Pham 423
21.1 Introduction 423
21.2 Text Mining in Practice 425
21.2.1 Product Development Process 425

21.2.2 Customer Service and Product Diagnosis 426
21.2.3 Improved Healthcare Quality with Electronic Medical Records 427
21.3 Background in Data Mining 427
21.3.1 Data 428
21.3.2 Information and Knowledge 428
21.3.3 Data Mining Process 429
21.4 State-of-the-art in Data Mining 430
21.4.1 Basic Statistics 431
21.4.2 Clustering 431
21.4.3 Nearest Neighbor 433
21.4.4 Decision Tree 433
21.4.5 Neural Network 435
21.4.6 Support Vector Machine 435
21.4.7 Rule Induction 436
21.4.8 Log-linear Analysis 437
21.4.9 Multidimensional Scaling 437
21.5 Research Challenges 438
References 438

22 Quality in Design: User-oriented Design of Public Toilets for Visually Impaired People
Kin Wai Michael Siu 441
22.1 Difficulties and Consequences for VIP in Accessing Public Environments 441
22.2 Deficiencies in Public Toilets for VIP 443
22.3 Studies on Accessibility of Public Toilets for VIP 444
22.4 Key Areas of Design Quality for Consideration 445
22.5 FISH: Better Designs of Public Toilets for VIP 449
22.5.1 Friendly 449
22.5.2 Informative 454
22.5.3 Safe 457
22.5.4 Hygienic 460
22.6 Conclusions 462
References 463

23 Assurance Cases for Reliability: Reducing Risks to Strengthen ROI for SCADA Systems
Ann Miller, Rashi Gupta 465
23.1 Introduction 465
23.2 Approach 466
23.3 SCADA Security and RAM Issues – An Overview 467
23.4 Risk Identification 468
23.4.1 Security and RAM Risks Associated with SCADA Systems 468
23.4.2 Business Risks Associated with SCADA Systems 472

23.5 Mapping Technical Risks into Business Risks 473
23.5.1 Mapping Security Risks into Business Risks 473
23.5.2 Mapping RAM Risks into Business Risks 473
23.6 Risk Assessment 481
23.6.1 Risk Assessment Form 481
23.6.2 Risk Severity Matrix 484
23.7 Goal-based Assurance Case Approach 485
23.7.1 Security-enhanced ROI 485
23.7.2 RAM-enhanced ROI by Using RAM Cases 485
23.8 Summary and Conclusion 488
References 489

24 Detecting Driver's Emotion: A Step Toward Emotion-based Reliability Engineering
Shuichi Fukuda 491
24.1 Background 491
24.2 Emotion 493
24.2.1 Primary or Basic Emotions 493
24.2.2 Detecting Driver's Emotion 493
24.3 Observation of Actual Driving 493
24.4 Experiments Using Driving Simulator 494
24.5 Facial Emotional Expression 495
24.5.1 Developing a Simpler Technique to Detect Facial Emotion 495
24.5.2 Detection of Emotion from Real Face 498
24.6 Detection of Fatigue 501
24.7 Detection of Dangerous Actions 503
24.8 Detection of Emotion from Voice 504
24.8.1 Detection of Anger and Fatigue from Voice 505
References 506

25 Mortality Modeling Perspectives
Hoang Pham 509
25.1 Introduction 509
25.2 Literature Discussions 510
25.3 Mortality Modeling 512
References 514
