1 Introduction—About the Need of an Evaluation Framework in Biometrics	1
G�rard Chollet, Bernadette Dorizzi, and Dijana Petrovska-Delacr�taz	
1.1 Reference Software	1
1.2 Biometrics	3
1.3 Databases	4
1.4 Risks	5
1.5 Biometric “Menagerie”	6
1.6 Spoofing	6
1.7 Evaluation	6
1.8 Evaluation Campaigns	7
1.9 Outline of This Book	8
References	9
2 The BioSecure Benchmarking Methodology for Biometric Performance Evaluation	11
Dijana Petrovska-Delacr�taz, Aur�lien Mayoue, Bernadette Dorizzi, and G�rard Chollet	
2.1 Introduction	11
2.2 Terminology	12
2.2.1 When Experimental Results Cannot be Compared	13
2.2.2 Reporting Results on a Common Evaluation Database and Protocol(s)	15
2.2.3 Reporting Results with a Benchmarking Framework	17

2.3	Description of the Proposed Evaluation Framework	19
2.4	Use of the Benchmarking Packages	22
2.5	Conclusions	23
	References	23
3	Iris Recognition	25
	Emine Krichen, Bernadette Dorizzi, Zhenan Sun, Sonia Garcia-Salicetti, and Tieniu Tan	
3.1	Introduction	25
3.2	State of the Art in Iris Recognition	26
	3.2.1 The Iris Code	26
	3.2.2 Correlation-based Methods	28
	3.2.3 Texture-based Methods	28
	3.2.4 Minutiae-based Methods	28
3.3	Current Issues and Challenges	29
3.4	Existing Evaluation Databases, Campaigns and Open-source Software	30
	3.4.1 Databases	30
	3.4.2 Evaluation Campaigns	31
	3.4.3 Masek's Open-source System	33
3.5	The BioSecure Evaluation Framework for Iris	34
	3.5.1 OSIRIS v1.0 Open-source Reference System	34
	3.5.2 Benchmarking Databases	35
	3.5.3 Benchmarking Protocols	36
	3.5.4 Benchmarking Results	36
	3.5.5 Experimental Results with OSIRIS v1.0 on ICE'2005 Database	37
	3.5.6 Validation of the Benchmarking Protocol	37
	3.5.7 Study of the Interclass Distribution	39
3.6	Research Systems Evaluated within the Benchmarking Framework	40
	3.6.1 Correlation System [TELECOM SudParis]	40
	3.6.2 Ordinal Measure [CASIA]	43
	3.6.3 Experimental Results	45
3.7	Fusion Experiments	46
3.8	Conclusions	48
	References	48
4	Fingerprint Recognition	51
	Fernando Alonso-Fernandez, Josef Bigun, Julian Fierrez, Hartwig Fronthaler, Klaus Kollreider, and Javier Ortega-Garcia	
4.1	Introduction	51
4.2	State of the Art in Fingerprint Recognition	53
	4.2.1 Fingerprint Sensing	53
	4.2.2 Preprocessing and Feature Extraction	54
	4.2.3 Fingerprint Matching	59
	4.2.4 Current Issues and Challenges	60

4.3	Fingerprint Databases	62
4.3.1	FVC Databases	62
4.3.2	MCYT Bimodal Database	63
4.3.3	BIOMET Multimodal Database	64
4.3.4	Michigan State University (MSU) Database	64
4.3.5	BioSec Multimodal Database	64
4.3.6	BiosecurID Multimodal Database	65
4.3.7	BioSecure Multimodal Database	65
4.4	Fingerprint Evaluation Campaigns	65
4.4.1	Fingerprint Verification Competitions	65
4.4.2	NIST Fingerprint Vendor Technology Evaluation	68
4.4.3	Minutiae Interoperability NIST Exchange Test	69
4.5	The BioSecure Benchmarking Framework	69
4.5.1	Reference System: NFIS2	70
4.5.2	Benchmarking Database: MCYT-100	72
4.5.3	Benchmarking Protocols	73
4.5.4	Benchmarking Results	74
4.6	Research Algorithms Evaluated within the Benchmarking Framework	75
4.6.1	Halmstad University Minutiae-based Fingerprint Verification System [HH]	75
4.6.2	UPM Ridge-based Fingerprint Verification System [UPM]	79
4.7	Experimental Results within the Benchmarking Framework	80
4.7.1	Evaluation of the Individual Systems	80
4.7.2	Multialgorithmic Fusion Experiments	82
4.8	Conclusions	84
	References	85
5	Hand Recognition	89
	Helin Dutağacı, Geoffroy Fouquier, Erdem Yörük, Bülent Sankur, Laurence Likforman-Sulem, and Jérôme Darbon	
5.1	Introduction	89
5.2	State of the Art in Hand Recognition	90
5.2.1	Hand Geometry Features	90
5.2.2	Hand Silhouette Features	92
5.2.3	Finger Biometric Features	92
5.2.4	Palmprint Biometric Features	92
5.2.5	Palmprint and Hand Geometry Features	93
5.3	The BioSecure Evaluation Framework for Hand Recognition	94
5.3.1	The BioSecure Hand Reference System v1.0	94
5.3.2	The Benchmarking Databases	97
5.3.3	The Benchmarking Protocols	98
5.3.4	The Benchmarking Results	100

5.4	More Experimental Results with the Reference System	101
5.4.1	Influence of the Number of Enrollment Images for the Benchmarking Protocol	103
5.4.2	Performance with Respect to Population Size	103
5.4.3	Performance with Respect to Enrollment	104
5.4.4	Performance with Respect to Hand Type	105
5.4.5	Performance Versus Image Resolution	107
5.4.6	Performances with Respect to Elapsed Time	108
5.5	Appearance-Based Hand Recognition System [BU]	109
5.5.1	Nonrigid Registration of Hands	110
5.5.2	Features from Appearance Images of Hands	112
5.5.3	Results with the Appearance-based System	115
5.6	Conclusions	121
	References	122
6	Online Handwritten Signature Verification	125
	Sonia Garcia-Salicetti, Nesma Houmani, Bao Ly-Van, Bernadette Dorizzi, Fernando Alonso-Fernandez, Julian Fierrez, Javier Ortega-Garcia, Claus Viehauer, and Tobias Scheidat	
6.1	Introduction	125
6.2	State of the Art in Signature Verification	128
6.2.1	Existing Main Approaches	128
6.2.2	Current Issues and Challenges	133
6.3	Databases	133
6.3.1	PHILIPS	133
6.3.2	BIOMET Signature Subcorpus	134
6.3.3	SVC'2004 Development Set	135
6.3.4	MCYT Signature Subcorpus	136
6.3.5	BioSecure Signature Subcorpus DS2	137
6.3.6	BioSecure Signature Subcorpus DS3	138
6.4	Evaluation Campaigns	139
6.5	The BioSecure Benchmarking Framework for Signature Verification	139
6.5.1	Design of the Open Source Reference Systems	140
6.5.2	Reference System 1 (Ref1-v1.0)	141
6.5.3	Reference System 2 (Ref2 v1.0)	143
6.5.4	Benchmarking Databases and Protocols	145
6.5.5	Results with the Benchmarking Framework	147
6.6	Research Algorithms Evaluated within the Benchmarking Framework	148
6.6.1	HMM-based System from Universidad Autonoma de Madrid (UAM)	149
6.6.2	GMM-based System	150
6.6.3	Standard DTW-based System	150
6.6.4	DTW-based System with Score Normalization	150

6.6.5	System Based on a Global Approach	151
6.6.6	Experimental Results	151
6.7	Conclusions	161
	References	164
7	Text-independent Speaker Verification	167
	Asmaa El Hannani, Dijana Petrovska-Delacrétaz, Benoît Fauve, Aurélien Mayoue, John Mason, Jean-François Bonastre, and Gérard Chollet	
7.1	Introduction	167
7.2	Review of Text-independent Speaker Verification	169
7.2.1	Front-end Processing	171
7.2.2	Speaker Modeling Techniques	175
7.2.3	High-level Information and its Fusion	179
7.2.4	Decision Making	181
7.2.5	Performance Evaluation Metrics	184
7.2.6	Current Issues and Challenges	185
7.3	Speaker Verification Evaluation Campaigns and Databases	186
7.3.1	National Institute of Standards and Technology Speaker Recognition Evaluations (NIST-SRE)	186
7.3.2	Speaker Recognition Databases	187
7.4	The BioSecure Speaker Verification Benchmarking Framework	188
7.4.1	Description of the Open Source Software	188
7.4.2	The Benchmarking Framework for the BANCA Database	189
7.4.3	The Benchmarking Experiments with the NIST'2005 Speaker Recognition Evaluation Database	191
7.5	How to Reach State-of-the-art Speaker Verification Performance Using Open Source Software	193
7.5.1	Fine Tuning of GMM-based Systems	194
7.5.2	Choice of Speaker Modeling Methods and Session's Variability Modeling	198
7.5.3	Using High-level Features as Complementary Sources of Information	201
7.6	Conclusions and Perspectives	203
	References	206
8	2D Face Recognition	213
	Massimo Tistarelli, Manuele Bicego, José L. Alba-Castro, Daniel González-Jiménez, Mohamed-Anouar Mellakh, Albert Ali Salah, Dijana Petrovska-Delacrétaz, and Bernadette Dorizzi	
8.1	State of the Art in Face Recognition: Selected Topics	213
8.1.1	Subspace Methods	214
8.1.2	Elastic Graph Matching (EGM)	216
8.1.3	Robustness to Variations in Facial Geometry and Illumination	217

8.1.4	2D Facial Landmarking	221
8.1.5	Dynamic Face Recognition and Use of Video Streams	226
8.1.6	Compensating Facial Expressions	228
8.1.7	Gabor Filtering and Space Reduction Based Methods	231
8.2	2D Face Databases and Evaluation Campaigns	232
8.2.1	Selected 2D Face Databases	232
8.2.2	Evaluation Campaigns	233
8.3	The BioSecure Benchmarking Framework for 2D Face	233
8.3.1	The BioSecure 2D Face Reference System v1.0	234
8.3.2	Reference 2D Face Database: BANCA	234
8.3.3	Reference Protocols	235
8.3.4	Benchmarking Results	235
8.4	Method 1: Combining Gabor Magnitude and Phase Information [TELECOM SudParis]	237
8.4.1	The Gabor Multiscale/Multiorientation Analysis	237
8.4.2	Extraction of Gabor Face Features	238
8.4.3	Linear Discriminant Analysis (LDA) Applied to Gabor Features	240
8.4.4	Experimental Results with Combined Magnitude and Phase Gabor Features with Linear Discriminant Classifiers	241
8.5	Method 2: Subject-Specific Face Verification via Shape-Driven Gabor Jets (SDGJ) [University of Vigo]	247
8.5.1	Extracting Textural Information	248
8.5.2	Mapping Corresponding Features	249
8.5.3	Distance Between Faces	250
8.5.4	Results on the BANCA Database	250
8.6	Method 3: SIFT-based Face Recognition with Graph Matching [UNISS]	251
8.6.1	Invariant and Robust SIFT Features	251
8.6.2	Representation of Face Images	251
8.6.3	Graph Matching Methodologies	252
8.6.4	Results on the BANCA Database	253
8.7	Comparison of the Presented Approaches	253
8.8	Conclusions	255
	References	255
9	3D Face Recognition	263
	Berk Gökberk, Albert Ali Salah, Lale Akarun, Remy Etheve, Daniel Riccio, and Jean-Luc Dugelay	
9.1	Introduction	263
9.2	State of the Art in 3D Face Recognition	264
9.2.1	3D Acquisition and Preprocessing	264
9.2.2	Registration	267
9.2.3	3D Recognition Algorithms	269

9.3	3D Face Databases and Evaluation Campaigns	279
9.3.1	3D Face Databases	279
9.3.2	3D Evaluation Campaigns	281
9.4	Benchmarking Framework for 3D Face Recognition	282
9.4.1	3D Face Recognition Reference System v1.0 (3D-FRRS)	282
9.4.2	Benchmarking Database	287
9.4.3	Benchmarking Protocols	287
9.4.4	Benchmarking Verification and Identification Results	287
9.5	More Experimental Results with the 3D Reference System	289
9.6	Conclusions	290
	References	291
10	Talking-face Verification	297
