1	Introduction	1
1.1	Goal	1
1.2	A Brief History of Articulated Robot Hands	2
1.2.1	The 1970s	2
1.2.2	The 1980s	4
1.3	Overview	11
2	Observation of Soft-fingered Grasping and Manipulation	13
2.1	Introduction	13
2.2	Object Pinching by a Pair of 1-DOF Fingers	14
2.3	Rotation of a Pinched Object by External Force	16
2.4	Concluding Remarks	17
3	Elastic Model of a Deformable Fingertip	19
3.1	Introduction	19
3.2	Static Elastic Model of a Hemispherical Soft Fingertip	21
3.2.1	Fingertip Stiffness	21
3.2.2	Elastic Force	24
3.2.3	Elastic Potential Energy	25
3.2.4	Relationship Between Elastic Force and Elastic Energy	25
3.3	Comparison with Hertzian Contact	27
3.4	Measurement of Young's Modulus	28
3.5	Compression Test	29
3.6	Concluding Remarks	32
4	Fingertip Model with Tangential Deformation	33
4.1	Introduction	33
4.2	Two-dimensional Elastic Energy Model	34
4.2.1	Derivation of the Energy Equation	34
4.2.2	Local Minimum of Elastic Potential Energy (LMEE)	36
4.2.3	Restoring Moment for a Contacted Object	37

4.2.4	Boundary Condition of Slip Motion	38
4.3	Formulation of Geometric Constraints	39
4.3.1	Normal Constraints	39
4.3.2	Tangential Constraints	40
4.3.3	LMEE with Constraints (LMEEwC)	43
4.4	Concluding Remarks	43
5	Variational Formulations in Mechanics	45
5.1	Introduction	45
5.2	Variational Principles	45
5.2.1	Variational Principle in Statics	45
5.2.2	Variational Principle in Dynamics	48
5.3	Numerical Optimization of Energy Functions	51
5.3.1	Nelder–Mead Method	51
5.3.2	Multiplier Method	55
5.4	Numerical Integration of Equations of Motion	60
5.4.1	Runge–Kutta Method	60
5.4.2	Constraint Stabilization Method	63
5.4.3	Stabilization of Pfaffian Constraints	66
5.5	Concluding Remarks	70
6	Statics of Soft-fingered Grasping and Manipulation	71
6.1	Introduction	71
6.2	Static Analysis Based on Force/Moment Equilibrium	71
6.2.1	Internal Energy Function	71
6.2.2	Numerical Analysis	72
6.3	Simulation	72
6.3.1	Analysis Without Gravity	72
6.3.2	Analysis Under Gravity	75
6.3.3	Degrees of Freedom Desired for Stable Manipulation	78
6.4	Experiments	78
6.5	Concluding Remarks	81
7	Dynamics of Soft-fingered Grasping and Manipulation	83
7.1	Introduction	83
7.2	Dynamics of Soft-fingered Grasping and Manipulation	83
7.3	Simulation of Soft-fingered Grasping and Manipulation	86
7.3.1	Numerical Integration of Lagrange Equations of Motion Under Geometric Constraints	86
7.3.2	Computation of Equations of Motion	87
7.4	Simulation Results	91
7.5	Experimental Results	95
7.6	Discussion	98
7.7	Conclusion and Research Perspective	98

8 Control of Soft-fingered Grasping and Manipulation	101
8.1 Introduction	101
8.2 Equations of Motion of the Two-fingered Hand	102
8.3 Simulations I: Posture Control of a Grasped Object	103
8.3.1 Serially-coupled Two-phased Object Orientation Controller	103
8.3.2 Examples of Failure	106
8.3.3 Available Range of the Biased Torque	108
8.3.4 Passivity Analysis	111
8.4 Simulations II: Responses for Time Delay	113
8.5 Experiments I: Posture Control of a Grasped Object	118
8.5.1 Object Orientation Control Under Constant Biased Torque (Exp. 1)	119
8.5.2 Open-loop Control of Biased Torque (Exp. 2)	121
8.5.3 Object Orientation Control Under Variable Biased Torque (Exp. 3)	121
8.6 Experiments II: Responses for Time Delay	124
8.7 Concluding Remarks	132
9 Geometric and Material Nonlinear Elastic Model	135
9.1 Introduction	135
9.2 Hertzian Contact and Kao's Elastic Model	135
9.3 Identification of Nonlinear Young's Modulus	136
9.4 Comparison with Hertzian Contact	138
9.5 Force Comparison	139
9.6 Concluding Remarks	141
10 Non-Jacobian Control of Robotic Pinch Tasks	143
10.1 Introduction	143
10.2 Kinematic Thumb Models in Previous Studies	144
10.3 Equations of Motion	147
10.4 Simulations	149
10.4.1 A Serial Two-phased Controller	149
10.4.2 Revolute Joint vs. Prismatic Joint (RP Joints)	150
10.4.3 Revolute Joint vs. Revolute Joint (RR Joints)	162
10.4.4 Prismatic 1-DOF Hand (P Joint)	167
10.4.5 Rotational 1-DOF Hand (R Joint)	169
10.5 Observations and Discussions	181
10.6 Concluding Remarks	183
11 Three-dimensional Grasping and Manipulation	185
11.1 Introduction	185
11.2 Quaternions	185
11.3 Spatial Geometric Constraints Between an Object and a Fingertip	192

11.4 Potential Energy of a Fingertip in Three-dimensional Grasping	197
11.5 Grasping and Manipulation by Three 1-DOF Fingers	201
11.5.1 Observation	201
11.5.2 Mathematical Description	202
11.5.3 Lagrange Equations of Motion	207
11.5.4 Simulation.....	214
11.6 Concluding Remarks	217
12 Conclusions.....	219
12.1 Main Contribution.....	219
12.2 Future Work	221
A Static Modeling of Fingertips	223
A.1 Contact Plane Formula	223
A.2 Spring Constant Formulation	223
A.3 Coordinate Conversion to Derive Fingertip Stiffness.....	224
A.4 Approximation Method for a Nonlinear Curve.....	226
B Three-dimensional Modeling of Fingertips	229
B.1 Derivatives of Angular Velocity Matrix	229
B.2 Bilinear Form of the Outer Product Matrix	230
B.3 Derivatives of Relative Angle with Respect to Quaternion Elements	231
B.4 Derivatives of Relative Angle with Respect to Finger Angle ..	232
B.5 Derivative of the Arctangent Function.....	233
