

Contents

1 Introduction	1
2 Aspects of Tumor Biology	7
Causes, Growth Factors, Endocrine and Exocrine Influences ... 7	
Oral Contraceptives in Women at Risk	10
Does Smoking Prevent or Promote Breast Cancer?	10
Hormone Replacement Therapy in Menopause	11
Advantages	11
Risks	12
Predisposing Genetic Factors	13
Case-Control Study on Sports and Breast Cancer	17
Summary	19
3 Prognostic Factors	20
Growth Rate, Tumor Size, Lymph Node Involvement, and Prognosis	20
Tumor Doubling Time	20
Lymph Node Involvement, Tumor Size, and Survival Time	21
4 Macroanatomy, Histology, Radiography, and Ultrasound	23
Anatomy of the Breast: Lobes, Lobules, and the Terminal Duct Lobular Unit (TDLU)	23
Terminal Duct Lobular Unit: Microradiography, Mammography, and Sonography	23
Hormone-Induced Proliferation	31
Mammographic Density and Cancer Risk	33
Precancerous Lesions: Atypical Ductal Hyperplasia and Noninvasive Carcinoma (Carcinoma In Situ)	34
Flat Epithelial Atypia (FEA) and Other Cylindrical Cell Lesions of the Breast	35
Atypical Ductal Hyperplasia	35
Ductal Carcinoma In Situ	37
Therapeutic Implications	45
Prognosis	58
Van Nuys Grading System	58
Lobular Neoplasias: Atypical Lobular Hyperplasia/ Lobular Carcinoma In Situ (LIN 1–3)	58
Therapeutic Implications	62
Local Recurrence of DCIS and LCIS and Follow-Ups	62
Invasive Carcinoma	62
Gross Morphology	63
Predominantly Ductal Growth	64
Predominantly Round to Lobulated Growth	69
Predominantly Stellate or Spiculated Growth	71
Mixed (Lobulated-Stellate-Ductal) Tumors	72
Diffuse Spread	72
Histologic Classification, Staging, and Grading	74
Conclusions	77
5 Early Detection and Appropriate Treatment	78
Diagnostic Options	78
Physical Examination: Visual Inspection	78
Mammography	91
Technical Aspects of an Optimum Mammogram	93
<i>E. Steinhilber</i>	
BIRADS Classification and Grading of Breast Density	98
Digital Mammography	100
Model of a Fully Digital Breast Diagnostic Service	101
<i>O. Wild</i>	
Future Trends	105
Double Reading	109
Mammographic Case Presentations and Training in Interpretation	110
<i>J. Herrmann</i>	
Screening	127
Digital Model of a Screening Unit	130
<i>O. Wild</i>	
Capabilities and Limitations of Screening (Pitfalls)	131

Ultrasound	153	Changes during Pregnancy and Lactation— A Special Diagnostic Challenge	283
Examination Technique	154	The Male Breast	291
Schematic Protocol of Ultrasound Examination	156	Gynecomastia	291
Basic Structures of the Breast and their Variants on Ultrasound, with Mammographic Correlation	156	Male Breast Cancer	295
Combined Sonographic and Mammographic Screening ...	193	Therapy and Perioperative Management	299
Outlook for Breast Ultrasound	193	Preoperative Localization	299
Axillary Mammography and Ultrasound	193	Digital Stereotactic Localization	300
Magnetic Resonance Imaging	201	Ultrasound-Guided Localization	305
Value of Magnetic Resonance Imaging and Other Modalities in Aesthetic Breast Reconstructions and Implantations	212	Specimen Radiography of Clinically Occult Lesions	305
Positron Emission Tomography with Computed Tomography .	227	Sentinel Lymph Node Biopsy (SLNB)	307
Interventional Procedures: Fine Needle Aspiration (FNA), Core Needle Biopsy (CNB), Vacuum Biopsy (VB), Preoperative Localization, and Specimen Radiography	230	<i>B. Koellner</i>	
Ultrasound-Guided Interventional Procedures	235	Principle	308
Digital Stereotactic Interventions	249	Technique of Sentinel Lymph Node Scintigraphy	308
MRI-Guided Core Needle Biopsy and Vacuum Biopsy	254	Sources of Error	310
Possibilities, Limitations, and Risks of Interventional Procedures	256	Safety Aspects	311
Possibilities and Limitations of Complementary Investigations	261	Contraindications	311
Neoplasms in Younger Women	275	Results	311
		Treatment-Related Reactions, Complications, and Errors	313
		Postoperative Changes and Follow-Up	328
		Local Recurrence	338
		Intramammary, Regional, and Generalized Metastasis	340
Answers			345
6 Summary			411
Bibliography			416
Index			427
