<b>Preface to the English Translation</b> .....	V
<b>Author's Note (Preface to the Earlier Russian Edition)</b> .....	VII

---

## Part I

---

<b>What Problems of Physics and Astrophysics Seem Now to Be Especially Important and Interesting?</b> .....	3
Preamble .....	3
Introduction .....	6
List of 'Especially Important and Interesting Problems' (1995) .....	11
Macrophysics .....	12
1. Controlled Nuclear Fusion .....	12
2. High-Temperature Superconductivity. Superdiamagnetism .....	18
3. New Substances (Production of Metallic Hydrogen and Some Other New Materials) .....	24
4. Some Problems of Solid-State Physics .....	27
5. Phase Transitions of the Second Order and Similar Transitions (Critical Phenomena). Interesting Examples of Such Transitions	29
6. Physics of Surfaces .....	35
7. Liquid Crystals. Very Large Molecules. Fullerenes .....	37
8. Matter in Superhigh Magnetic Fields .....	38
9. X-ray Lasers, Grasers, and New Superpowerful Lasers .....	40
10. Strongly Nonlinear Phenomena (Nonlinear Physics). Solitons, Chaos. Strange Attractors .....	45
11. Superheavy Nuclei (Far Transuranic Elements). Exotic Nuclei .	47
Microphysics .....	50
12. What is Understood by Microphysics? .....	50
13. Mass Spectrum. Quarks and Gluons. Quantum Chromodynamics	53
14. Unified Theory of the Weak and Electromagnetic Interactions. $W^\pm$ and $Z^0$ Bosons. Leptons .....	59
15. Grand Unification. Proton Decay. Neutrino Mass. Magnetic Monopoles. Superunification. Superstrings .....	62

16. Fundamental Length. Particle Interactions at High and Ultrahigh Energies .....	67
17. Violation of <i>CP</i> Invariance. Nonlinear Phenomena in Vacuum and Superhigh Electromagnetic Fields. Phase Transitions in Vacuum. Some Comments on the Development of Microphysics .....	72
18. Microphysics Yesterday, Today, and Tomorrow .....	80
Astrophysics .....	87
19. Experimental Verification of the General Theory of Relativity .	87
20. Gravitational Waves .....	90
21. The Cosmological Problem. Singularities in the General Theory of Relativity and Cosmology. Relationship between Cosmology and High-Energy Physics ..	93
22. Neutron Stars and Pulsars. Supernovae. Black Holes .....	98
23. Quasars and Galactic Nuclei. Formation of Galaxies. Problem of Dark Matter (Missing Mass). Does Astronomy Require a ‘New Physics’? .....	109
24. Origin of Cosmic Rays and Cosmic Gamma and X-ray Radiation. Gamma Bursts .....	119
25. Neutrino Astronomy .....	129
26. The Contemporary Stage in the Development of Astronomy ...	131
Concluding Remarks .....	135
27. General Comments on Scientific Progress .....	135
28. In Lieu of a Conclusion .....	138
References .....	142

<b>What Problems of Physics and Astrophysics Seem Now to Be Especially Important and Interesting (Thirty Years Later, Already on the Verge of the 21st Century)? .....</b>	<b>149</b>
1. Introduction .....	149
2. List of ‘Especially Important and Interesting Problems’ (1999) .	152
3. Some Comments (Macrophysics) .....	154
4. Some Comments (Microphysics) .....	160
5. Some Comments (Astrophysics) .....	165
6. Three More ‘Great’ Problems .....	183
7. An Attempt to Predict the Future .....	187
References .....	193

---

**Part II**

---

<b>How Does Science Develop? Remarks on <i>The Structure of Scientific Revolutions</i> by T. Kuhn .....</b>	<b>201</b>
Preamble .....	201
1. The Subject Matter of the Book .....	202

2. General Assessment .....	203
3. The Principle of Correspondence and the Completeness of a Theory in the Domain of Its Applicability .....	204
4. Unhistoric Notions .....	207
5. The Exponential Law of Scientific Development .....	209
6. ‘Nonuniformity’ and ‘Limits’ of Scientific Progress .....	211
Concluding Remarks .....	215
<b>Who Created the Theory of Relativity and How Was It Developed? A Review with a Preamble and a Commentary</b> 217	
Preamble .....	217
Review Text.....	218
Commentary .....	224
1. What Is the Special Theory of Relativity? .....	224
2. Who Created the STR and How Was It Created? .....	227
3. Comments on Priority Issues .....	232
4. The Source of Scientific Knowledge .....	237
5. Science and Ethics .....	238
<b>Does Astronomy Need ‘New Physics’?</b> .....	241
Introduction.....	241
1. What Does the Question Mean and How Is It Answered? .....	242
2. Is ‘New Physics’ Needed in Physics and Astronomy? .....	245
3. Possible Completeness of a Physical Theory in Its Applicability Range .....	249
4. Once Again about ‘New Physics’ in Astronomy .....	251
Final Remarks .....	254
Attachment .....	255
Note to the English Translation.....	257
References .....	257
<b>Physical Laws and Extraterrestrial Civilizations</b> .....	259
<b>Wide Scope and Up-to-Date Information as a Precondition of Successful Research</b> .....	265
<b>Physics Stays Young. A Way of Answering the Questionnaire in <i>Nauka i Zhizn’</i> Magazine</b> .....	269
Ten Years Later (1994) .....	274
Six Years Later (2000) .....	275
<b>On Popular Science and More</b> .....	277
How Far Can Popular Science Go? .....	278
Can One Use Algebra in Popular-Science Writing? .....	281

How to Verify a Theory, and What Is the Role Played by the ‘Scientific Public’? .....	282
Note to the English Translation .....	284
References .....	284
<b>Notes on the Occasion My Jubilee</b> .....	285
What This Is All About .....	286
School .....	287
The Department of Physics .....	291
Majoring. Theorists and Experimenters .....	291
The Dependence of Scientists’ Productivity on Age (until 60) .....	295
On the Age Distribution of Scientists .....	297
After 60 (on Old-Age Scientists) .....	300
“There Are no Greater Dangers in Old Age Than Indolence and Idleness” (Cicero) .....	303
A Kind of Conclusion .....	307
Notes to the English Translation .....	307
<b>A Scientific Autobiography – an Attempt</b> .....	309
Contents .....	309
1. Introduction .....	309
2. Classical and Quantum Electrodynamics .....	310
3. Radiation by Uniformly Moving Sources (the Vavilov–Cherenkov and Doppler Effects, Transition Radiation, and Related Phenomena) .....	313
4. About This Article .....	316
5. Higher Spins .....	318
6. Propagation of Electromagnetic Waves in Plasmas (in the Ionosphere). Radio Astronomy .....	319
7. Cosmic-Ray Astrophysics. Gamma-Ray Astronomy. Selected Astrophysical Results .....	323
8. Scattering of Light. Crystal Optics with Spatial Dispersion Taken into Account .....	324
9. Theory of Ferroelectric Phenomena. Soft Modes. Limits of Applicability of the Landau Theory of Phase Transitions ..	326
10. Superfluidity of Helium II near the Lambda Point. Other Publications on Superfluidity .....	329
11. Theory of Superconductivity .....	334
12. Concluding Remarks .....	339
References .....	341

---

**Part III**

---

<b>About Igor Evgenevich Tamm</b> .....	351
---	-----

A Piece of Advice Given by Leonid Isaakovich Mandelshtam .	361
On the 90th Anniversary of the Birth of Nikolai Dmitrievich Papaleksi . . . . .	365
About Lev Davidovich Landau . . . . .	367
A Remarkable Physicist . . . . .	367
Further Thoughts . . . . .	371
To the Memory of Aleksandr Aleksandrovich Andronov . . . . .	385
About Aleksandr Lvovich Mints . . . . .	389
In Commemoration of Sergei Ivanovich Vavilov . . . . .	395
A Story of Two Directors (S. I. Vavilov and D. V. Skobeltsyn)	397
To the Memory of Ilya Mikhailovich Frank . . . . .	403
About Grigorii Samuilovich Landsberg . . . . .	411
To the Memory of Evgenii Konstantinovich Zavoiskii . . . . .	419
About Matvei Samsonovich Rabinovich . . . . .	423
Mstislav Vsevoldovich Keldysh (A Detached View) . . . . .	425
About Albert Einstein . . . . .	429
In Memory of Niels Bohr . . . . .	433
About Richard Feynman – a Remarkable Physicist and a Wonderful Man . . . . .	443
John Bardeen and the Theory of Superconductivity . . . . .	451
On High-Energy Astrophysics (On the 80th Birthday of Jan Oort) . . . . .	457
The Sakharov Phenomenon . . . . .	471
Notes on A. I. Solzhenitsyn, A. D. Sakharov, and the ‘Crosswind’ . . . . .	507
About the Author . . . . .	512
