Contents

Preface

Part I Astrophysics

Numerical Simulations of Compact Binary Systems
Bernd Brügmann, José A. González, Mark D. Hannam, Sascha Husa and Ulrich Sperhake 3

***Ab Initio* Vlasov Code Simulation of Micro-Turbulence, Phase Space Structure Formation and the Resulting Anomalous Transport and Particle Acceleration in Collisionless Astrophysical Plasmas, I: The 2D2V Code**
Jörg Büchner for the TSSSP team 19

The ART of Cosmological Simulations
Stefan Gottlöber and Anatoly Klypin 29

Modeling of Turbulent Flows Applied to Numerical Simulations of Galaxy Clusters
Luigi Iapichino, Jens C. Niemeyer, Julian Adamek, Surajit Paul and Mario Scuderi 45

The Onset of Convection During the Core Helium Flash
Miroslav Mocák and Ewald Müller 57

Formation of the First Supermassive Black Holes in the Early Universe
Dominik Schleicher and Max Camenzind 65

Star Formation in the Turbulent Interstellar Medium and Its Implications on Galaxy Evolution
Wolfram Schmidt, Andreas Maier, Markus Hupp, Christoph Federrath and Jens Niemeyer 79

The Aquarius Project: Cold Dark Matter under a Numerical Microscope
Volker Springel, Simon D.M. White, Julio Navarro, Adrian Jenkins, Carlos S. Frenk, Amina Helmi and Liang Gao 93

Part II Biosciences

ParBaum: Large-Scale Maximum Likelihood-Based Phylogenetic Analyses
Michael Ott, Jaroslaw Zola, Srinivas Aluru and Alexandros Stamatakis 111

Part III Chemistry

A Theoretical Study of Polyoxometalates and Dendrizyme Model Compounds
Ralf Brodbeck and Dirk Andrae 129

Multi Dimensional Quantum Dynamics of Chemical Reaction Processes
Maurício D. Coutinho-Neto, Alexandra Viel and Uwe Manthe 143

Investigating Protein-Protein and Protein-Ligand Interactions by Molecular Dynamics Simulations
Florian Haberl, Olaf Othersen, Ute Seidel, Harald Lanig and Tim Clark . . . 153

Probing the Mechanical Strength of Chemical Bonds by Stretching Single Molecules
Elizabeth M. Lupton and Irmgard Frank 165

Plane Wave Density Functional Model Studies of Chemistry at Surfaces
Notker Rösch and Sven Krüger 173

Oxidative Dehydrogenation of Simple Molecules over RuO_2(110): Density Functional Theory Calculations
Ari P. Seitsonen and Herbert Over 187

Redox Catalysis and Reactivity of Metalloporphyrines
Tatyana E. Shubina and Timothy Clark 201

Part IV Computational Fluid Dynamics

Numerical Optimization of Compressor Casing Treatments for Influencing the Tip Gap Vortex
Oliver Borm and Florian Danner 215

High-Performance Computing for the Investigation of the Flow Past an Airfoil with Trailing-Edge Stall
Michael Breuer and Nikola Jovičić 227

On the Turbulence Structure in Supersonic Nozzle Flow
Somnath Ghosh and Rainer Friedrich 241

Large Scale CFD for Complex Flows
T. Indinger and C. Stemmer 251

Flow Simulations of an Axial Transonic Compressor Stage
Jens Iseler and Reinhard Niehuis 261

Gyrokinetic Turbulence Simulations for Fusion Plasmas
F. Jenko, A. Bottino, T. Görler and E. Poli 275

A Parallel CFD Solver Using the Discontinuous Galerkin Approach
Christian Lübon, Manuel Keßler and Siegfried Wagner 291

A-priori Analysis of the LMSE Micromixing Model for Filtered-Density Function Simulation in High Schmidt Number Flows
F. Schwertfirm and M. Manhart 303

Characterization of the Dissipation Tensor from DNS of Grid-Generated Turbulence
N. Özyilmaz, K.N. Beronov and A. Delgado 315

Numerical Investigation of the Noise Emission from Serrated Nozzles in Coaxial Jets
Ł. Panek, J. Yan, D. Eschricht and F. Thiele 325

Numerical Simulation of Fluid-Structure- and Fluid-Structure-Acoustic Interaction Based on a Partitioned Coupling Scheme
Frank Schäfer, Stefan Kniesburges, Thomas Uffinger, Stefan Becker, Jens Grabinger, Gerhard Link and Manfred Kaltenbacher 335

Large-Eddy Simulation of Plane Jet Injection into Supersonic Turbulent Crossflow
Christoph Schaupp and Rainer Friedrich 349

Simulation of the Flow around the Stratospheric Observatory for Infrared Astronomy SOFIA Using URANS and DES
Sven Schmid, Thorsten Lutz and Ewald Krämer 365

Direct Numerical Simulation of Flame/Acoustic Interactions
Hemdan Shalaby, Gábor Janiga and Dominique Thévenin 377

Scaling Properties of Convective Turbulence
Dan Škandera, Angela Busse and Wolf-Christian Müller 387

Parallel Free-Surface and Multi-Phase Simulations in Complex Geometries Using Lattice Boltzmann Methods
Jonas Tölke, Benjamin Ahrenholz, Jan Hegewald and Manfred Krafczyk . . . 397

Dynamics of Heavy Particles in Turbulent Flows
Federico Toschi 411

Interactive Indoor Thermal Comfort Evaluation
Christoph van Treeck, Petra Wenisch, Michael Pfaffinger, Leonhard Scheck and Ernst Rank 421

DNS of Transition to Turbulence in a Linear Compressor Cascade
T.A. Zaki, P.A. Durbin, J. Wissink and W. Rodi 431

Part V Computer Science

Some Applications of the PDE Solver FDEM with Error Estimate
Torsten Adolph and Willi Schönauer 443

waLBerla: The Need for Large-Scale Super Computers
S. Donath, J. Götz, S. Bergler, C. Feichtinger, K. Iglberger and U. Rüde . . . 459

Scalable Multigrid
Tobias Gradl, Christoph Freundl, Harald Köstler and Ulrich Rüde 475

RZBENCH: Performance Evaluation of Current HPC Architectures Using Low-Level and Application Benchmarks
Georg Hager, Holger Stengel, Thomas Zeiser and Gerhard Wellein 485

Towards Scalable Parallel Numerical Algorithms and Dynamic Load Balancing Strategies
Ralf Hoffmann, Sascha Hunold, Matthias Korch and Thomas Rauber 503

The HLRB Cluster as Quantum CISC Compiler
T. Schulte-Herbrüggen, A. Spörl, K. Waldherr, T. Gradl, S.J. Glaser and T. Huckle 517

Concepts for Efficient Flow Solvers Based on Adaptive Cartesian Grids
Ioan Lucian Muntean, Miriam Mehl, Tobias Neckel and Tobias Weinzierl . . 535

Challenges and Potentials of Emerging Multicore Architectures
Markus Stürmer, Gerhard Wellein, Georg Hager, Harald Köstler and Ulrich Rüde 551

Part VI Geophysics

A p-Adaptive Discontinuous Galerkin Method with Local Time Steps for Computational Seismology
Michael Dumbser and Martin Käser 569

Predictability of Rayleigh-Number and Continental-Growth Evolution of a Dynamic Model of the Earth's Mantle
Uwe Walzer and Roland Hendel 585

Quantifying Uncertainties in Earthquake Scenario Ground Motion Calculations: Finite Source Effects
H.J. Wang, H. Igel, A. Cochard and M. Ewald 601

Part VII High Energy Physics

Dynamical Lattice QCD with Ginsparg-Wilson-Type Fermions
T. Burch, D. Chakrabarti, C. Ehmann, C. Gattringer, M. Göckeler, C. Hagen, P. Hasenfratz, D. Hierl, C.B. Lang, M. Limmer, V. Maillart, T. Maurer, D. Mohler, F. Niedermayer, A. Schäfer, S. Solbrig, C. Weiermann and M. Weingart 613

Simulation of $N_f = 2 + 1$ Lattice QCD at Realistic Quark Masses
Y. Nakamura, G. Schierholz, T. Streuer and H. Stüben 627

Part VIII Solid State Physics

Long-Range Chiral Recognition Due to Substrate Locking and Substrate-Adsorbate Charge Transfer
S. Blankenburg, F. Ortmann and W.G. Schmidt 641

Quantum Transport within a Background Medium: Fluctuations versus Correlations
Holger Fehske, Andreas Alvermann and Gerhard Wellein 649

Quantum Monte Carlo Studies of Strongly Correlated Electron Systems
S. Hochkeppel, T.C. Lang, C. Brünger, F.F. Assaad and W. Hanke 669

Charge Transport through Guanine Crystals
Frank Ortmann, Martin Preuss, Björn Oetzel, Karsten Hannewald and Friedhelm Bechstedt 687

Electronic Charge and Orbital Reconstruction at Cuprate-Titanate Interfaces
Natalia Pavlenko and Thilo Kopp 697

Compensation Mechanisms and Functionality of Transition Metal Oxide Surfaces and Interfaces: A Density Functional Theory Study
Rossitza Pentcheva, Narasimham Mulakaluri, Wolfgang Moritz, Warren E. Pickett, Hans-Georg Kleinhenz and Matthias Scheffler 709
