Contents

1 Defining Revenue Management 1
1.1 Introduction 1
1.2 Characteristics of Revenue Management Problems 2
1.3 Revenue Management Problems in Various Industries ... 7
1.4 Structuring the Field of Revenue Management 15
1.4.1 Capacity Control and Overbooking 15
1.4.2 Dynamic Pricing and Auctions 17
1.4.3 Relationship of RM, Capacity Control and Pricing 23
1.5 Purpose and Scope of this Book 27

2 Capacity Control and Overbooking 31
2.1 Introduction 31
2.2 Capacity Control by Booking Limits 33
2.2.1 Introduction 33
2.2.2 Nested Booking Limits 36
2.2.3 Literature Review 54
2.2.4 Discussion of Booking Limit Controls 65
2.3 Capacity Control by Bid Prices 66
2.3.1 Introduction 66
2.3.2 Forms of Bid Prices and Their Optimality 68
2.3.3 Additive Bid Prices from Deterministic Linear Programs 70
2.3.4 Advanced Approaches to Compute Additive Bid Prices 74
2.3.5 Non-Additive Bid Prices and Approximate Dynamic Programming 77
2.4 Overbooking 80
2.4.1 Introduction 80

2.4.2 Literature Review 83

3 Recent Advances in Revenue Management 91
3.1 Introduction 91
3.1.1 Problems with Substitution and/or Multimodal Products 91
3.1.2 Relationship to the Field of RM 95
3.1.3 Further Recent Advances of the Field 96
3.2 Choice-based RM 97
3.2.1 Introduction 97
3.2.2 Airline Single Leg Problems 99
3.2.3 Network Problems 109
3.3 Routing Control and Flexible Products 113
3.3.1 Introduction 113
3.3.2 Literature Review 116

4 Evaluating Revenue Management Techniques: Instance Generation 121
4.1 Introduction 121
4.2 Deterministic/Static Aspects 122
4.3 Stochastic/Dynamic Aspects 124
4.4 Statistical Aspects 126

5 Simulation of Stochastic Demand Data Streams 129
5.1 Literature Review 130
5.1.1 Categorizing Demand Models 131
5.1.2 Modeling the Dynamics of Demand 132
5.2 Simulating a Single Demand Data Stream 141
5.2.1 Random Number Generation 143
5.2.2 Simulating NHPPs (with Arbitrary Rate Functions) 144
5.2.3 The Beta-Gamma Arrival Process 145
5.3 Simulating Multiple Demand Data Streams 152
5.3.1 Expected Capacity Utilization Under Independent Demand 153
5.3.2 Expected Capacity Utilization Under a Choice Model of Demand 155
5.3.3 Expected Capacity Utilization with Flexible Products 156
5.4 Some Remarks on Parameter Estimation 157
5.5 Summary and Future Research Opportunities 160

6 Revenue Management in Broadcasting Companies ... 163
6.1 Introduction ... 163
6.1.1 Case Study: Broadcasting in Spanish Television ... 163
6.1.2 The Process of Ordering and Scheduling TV Ads ... 164
6.1.3 Determining Prices for Single Spots ... 165
6.1.4 Determining Prices for a Bundle of Spots ... 167
6.1.5 The Revenue Management Problem in Broadcasting Companies ... 168
6.1.6 Literature Review ... 171
6.2 Mathematical Model ... 174
6.2.1 Formalizing the Supply Side ... 176
6.2.2 Formalizing the Demand Side ... 176
6.2.3 A Linear, Mixed-Integer Model ... 177
6.3 Heuristics ... 178
6.3.1 Assessing the Difficulty of Finding Feasible Solutions ... 178
6.3.2 MIP-Based Heuristics ... 181
6.3.3 LP-Based Heuristics ... 181
6.3.4 Greedy Heuristic ... 182
6.4 Optimal Solutions: Branch and Cut ... 183
6.4.1 General Outline of Cutting Plane Methods ... 183
6.4.2 Effectiveness of Cutting Planes ... 187
6.4.3 Cutting Planes for Knapsack Restrictions: Cover Cuts ... 190
6.4.4 Heuristics Applied During the Branching Process ... 205
6.4.5 Branching Rules and Node Selection ... 207
6.4.6 Additional Implementation Details ... 210
6.5 Test Bed ... 212
6.5.1 Instance Generation Procedure ... 212
6.5.2 Heuristics ... 216
6.5.3 Branch and Cut ... 219
6.6 Some Remarks on RM in Broadcasting Companies Under Uncertainty ... 235
6.7 Concluding Remarks ... 242

7 Conclusion ... 245
7.1 Summary and Results ... 245
7.2 Future Research Opportunities ... 246

A Demand Distribution of the Beta-Gamma-Arrival Process 249
A.1 Marginal Distribution of $N(T)$ 249
A.2 Posterior Distribution of D 250

B Implementation of the Combo Algorithm: Technical Details 255
