Contents

1 Solar Radiation Measurement: Progress in Radiometry for Improved Modeling 1
Christian A. Gueymard and Daryl R. Myers
1 Introduction 1
2 Solar Radiation Measurement Fundamentals 1
3 Components of Solar Radiation in the Atmosphere 3
4 Instrumentation: Solar Radiometer 5
5 Radiometric Reference and Calibration Methods 8
5.1 The Solar Radiation Measurement Reference: WRR 9
5.2 Calibration of Solar Radiometers 10
6 Uncertainty and Characterization of Solar Radiometers 12
6.1 Radiometer Uncertainty Sources 14
7 Optimal Radiometry and Correction Techniques 17
8 Measurement Networks and Data Quality Assessment 18
8.1 Large Networks and Primary Data Sources 18
8.2 Secondary Data Sources 21
8.3 Data Quality Assessment 22
9 Conclusions 25
References 25

2 Fractal Classification of Typical Meteorological Days from Global Solar Irradiance: Application to Five Sites of Different Climates 29
Samia Harrouni
1 Introduction 29
2 Solar Radiation 30
3 Fractal Dimension Estimation 32
3.1 Preliminaries 32
3.2 Experimental Determination of the Fractal Dimension of Natural Objects 33
3.3 Discussion of the Two Methods 35

4 Measuring the Fractal Dimension of Signals 36
4.1 A Survey of Existing Methods 36
4.2 New Method for Estimating the Fractal Dimension of Discrete Temporal Signals 37
5 Classification of the Solar Irradiances to Typical Days 40
5.1 A Survey of Existing Methods 40
5.2 Fractal Classification of Solar Irradiance 41
6 Conclusions 52
References 52

3 Modelling the Statistical Properties of Solar Radiation and Proposal of a Technique Based on Boltzmann Statistics 55
Joaquin Tovar-Pescador
1 Introduction 55
2 Physical and Statistical Modelling of Solar Radiation 56
3 Stochastic Processes. Stationarity 57
4 The "k" Indices 59
5 Density and Cumulative Distribution Functions 60
6 A Research Survey on the Statistical Behaviour of Solar Radiation Components 62
6.1 Daily Distributions of Global Radiation 62
6.2 Hourly Distributions of Global Radiation 68
6.3 Instantaneous Distributions of Global Radiation 68
6.4 Distributions of Diffuse and Direct Components of Global Radiation 69
7 Modelling the Instantaneous Distributions Conditioned by the Optical Air Mass 70
7.1 Statistical Investigation of the Clearness Index 70
7.2 Distributions of 1-minute k_b Values Conditioned by Optical Air Mass 79
7.3 One-Minute k_d Values Distributions Conditioned by the Optical Air Mass 83
8 Conditioned Distributions $\overline{k_t^H}$ 85
9 Conclusions and Future Work 88
References 89

4 A Method for Determining the Solar Global and Defining the Diffuse and Beam Irradiation on a Clear Day 93
Amiran Ianetz and Avraham Kudish
1 Introduction 93
2 Solar Global Irradiation on a Clear Day 94
2.1 Classification of Clear Days 94
2.2 Models for Determining the Global Irradiation on Clear Day 95
2.3 Berlynd Model for Determining Global Irradiation on Clear Days 97
2.4 Correlation Between Clear Day Global Index K_C and K_T 100

3 Solar Horizontal Diffuse and Beam Irradiation on Clear Days 103
3.1 Clear Day Horizontal Diffuse Irradiation 104
3.2 Clear Day Horizontal Beam Irradiation 105
3.3 Correlation Between Clear Day Horizontal Diffuse and Beam Indices 106
4 Analysis of Solar Irradiation Distribution Types 108
4.1 Distribution Types 108
4.2 Frequency Distribution and Distribution Types for Clear Day Irradiation Index 109
4.3 Frequency Distribution and Distribution Types for Clear Day Horizontal Beam Irradiation Index 110
4.4 Frequency Distribution and Distribution Types for Clear Day Horizontal Diffuse Irradiation Index 111
5 Conclusions 111
References 112

5 Recent Advances in the Relations between Bright Sunshine Hours and Solar Irradiation 115
Bulent G. Akinoglu
1 Introduction 115
2 Measurements and Data Availability 116
3 Angström-Prescott Relation and its Physical Significance 119
4 Physical Modeling and Some Recent Models 122
4.1 Introduction 122
4.2 Yang and Co-Workers Hybrid Model 124
4.3 Direct Approach to Physical Modeling 127
4.4 Quadratic Variation of a with b 134
5 Model Validation and Comparison 136
6 Discussions, Conclusions and Future Prospect 138
References 141

6 Solar Irradiation Estimation Methods from Sunshine and Cloud Cover Data 145
Ahmet Duran Şahin and Zekai Şen
1 Introduction 145
2 Basic Equations for Sunshine Duration and Extraterrestrial Solar Irradiation 146
3 Measured Global Solar Irradiation and Sunshine Duration Properties 148
4 Angström Equation 149
4.1 Physical Meaning of Angström Equation 151
4.2 Assumptions of the Classical Equation 152
4.3 Angström Equation and Its Statistical Meaning 152
4.4 Non-linear Angström Equation Models 153
5 Enhancing Statistical Meaning of Angström Equation with Two Methodologies 153
5.1 Successive Substitution Methodology (SSM) 154
5.2 Data and Study Area 156
5.3 Case Study 157

6 Unrestricted Methodology (UM) 159
6.1 Case Study 162
7 An Alternative Formulation to Angström Equation 165
7.1 Physical Background of Proposed Methodology 165
7.2 Case Study 166
8 Conclusions 171
References 172

7 Solar Irradiation via Air Temperature Data 175
Marius Paulescu
1 Introduction 175
2 Prediction from Air Temperature and Cloud Amount 176
2.1 Mathematically Integrable Solar Irradiance Model 177
3 Models for Daily Solar Irradiation from Daily Extremes of Air Temperature 180
4 Fuzzy Models 182
4.1 Fuzzy Logic Introduction 182
4.2 A Fuzzy Model for Daily Solar Irradiation 184
4.3 Computation Examples 187
4.4 Program Description 189
5 Accuracy of Solar Irradiation Models Based on Air Temperature Data 189
6 Conclusions 191
References 191

8 Models of Diffuse Solar Fraction 193
John Boland and Barbara Ridley
1 Introduction 193
2 Defining the Problem 195
3 Constructing a Model of the Diffuse Fraction 197
3.1 Justification for a Logistic Function – Experimental Data Analysis 197
3.2 The Theoretical Development of the Relationship 198
4 Results for Various Locations 204
5 Validation of the Model 205
6 Identifying Outliers 207
7 Conclusion for the Single Predictor Variable Model 209
8 Identification of Further Explanatory Variables 210
9 The Daily Solar Profile 216
10 Algorithms 217
10.1 Diffuse Fraction Model Parameter Estimation 217
10.2 Daily Profile 218
11 Conclusions 218
References 218

9 Estimation of Surface Solar Radiation with Artificial Neural Networks 221
Filippos S. Tymvios, Silas Chr. Michaelides and Chara S. Skouteli
1 Neural Networks: An Overview 221
2 Biological Neurons 222
3 Artificial Neurons 223
4 Artificial Neural Networks 224
5 The Perceptron 226
5.1 Perceptron Learning Algorithm (Delta Rule) 227
6 Multi-Layer Perceptron (MLP) 228
6.1 Backpropagation 228
6.2 Error Surface 229
6.3 Data Preparation (Preprocessing) 230
6.4 Overfitting - Underfitting the Network 231
7 Building Neural Networks 231
7.1 Dataset 232
7.2 An Outline of Cyprus Climate 233
7.3 Applying ANN with Neurosolutions 233
7.4 Applying ANN with MATLAB 236
8 A Survey of Neural Network Modeling Approaches 241
8.1 Hourly Solar Irradiance Models 242
8.2 Daily Solar Irradiance Models 245
8.3 Models for Monthly Mean Daily Solar Radiation 246
8.4 Maximum Solar Irradiance Models 247
8.5 Time Series Prediction Models 247
8.6 Models for Solar Potential 248
9 Conclusions 250
References 254

10 Dynamic Behavior of Solar Radiation 257
Teolan Tomson, Viivi Russak and Ain Kallis
1 Introduction 257
2 Averaged Data Sets 260
2.1 Annual Sums of Global Radiation 260
2.2 Monthly Sums of Global Radiation 261
2.3 Daily Sums of Global Radiation 262
2.4 Hourly Sums of Global Radiation 263
2.5 Non-Standard Averaging Intervals in Scientific Literature . . . 264
3 Processing Data Sets Expected to be Stationary 264
3.1 Preparation of the Recorded Data Set 266
3.2 Template Preparation to Calculate Autocovariation and Autocorrelation Functions 267
3.3 Interpretation of the Results 269
4 Typical Regimes of Solar Radiation 270

5 Minute-Long Averages of Global Irradiance 272
5.1 Studied Regimes of Variable Solar Radiation 272
5.2 Methodical Approach 273
5.3 Definition of the Fluctuation of Solar Irradiance 274
5.4 Fluctuation of Solar Irradiance During Stable in General Time Intervals 275
5.5 Fluctuation of Solar Irradiance During Unstable in General Time Intervals 276
5.6 Duration of Stable Irradiance During Generally Unstable Time Intervals 276
5.7 Periodicity of Fluctuations of Unstable Radiation 278
5.8 Application of the Statistical Model of Short-Term Stability . 279
6 Conclusions 279
References 280

11 Time Series Modelling of Solar Radiation 283
John Boland
1 Introduction 283
2 Characteristics of Climatic Variables 284
2.1 The Cyclical or Steady Periodic Component 285
2.2 Sidebands 287
2.3 How Many Cycles? 287
2.4 Modelling the Volatility 289
3 ARMA Modelling 290
3.1 Identification of Process 290
3.2 Autocorrelation and Partial Autocorrelation Functions 291
4 The Daily Model 293
5 Synthetic Generation 299
6 The Hourly Model 302
7 Model Validation 304
7.1 Synthetic Generation 306
8 Daily Profiling 307
9 Algorithms 309
9.1 Daily Profile 309
9.2 Power Spectrum 309
9.3 Daily Fourier Series Parameter Estimation 309
9.4 Hourly Fourier Series Parameter Estimation 310
10 Conclusions 310
References 311

12 A new Procedure to Generate Solar Radiation Time Series from Machine Learning Theory 313
Llanos Mora-López
1 Introduction 313
2 Probabilistic Finite Automata 314
2.1 Algorithm to Build Probabilistic Finite Automata 316
2.2 Predicting New Values 317
2.3 How the Model can be Validated 318

3 Generating Solar Irradiation Time Series Using Probabilistic Finite Automata . . . 318
3.1 Data Set . . . 319
3.2 Discretization of Time Series of Hourly Solar Global Irradiation . . . 319
3.3 Estimating and Using PFA for Hourly Solar Irradiation Series . . . 320
4 Predicting New Series from PFA . . . 321
5 Software . . . 324
6 Conclusions . . . 324
References . . . 325

13 Use of Sunshine Number for Solar Irradiance Time Series Generation . . . 327
Viorel Badescu
1 Introduction . . . 327
2 Meteorological and Actinometric Databases . . . 328
3 Sunshine Number . . . 330
3.1 Statistical Moments and Measures . . . 333
3.2 Time Averaged Statistical Measures . . . 335
3.3 Estimation of Statistical Measures . . . 335
4 Simple Clear Sky Model . . . 338
5 Solar Irradiance Computation on Cloudy Sky . . . 342
5.1 Sunshine Number not Considered . . . 345
5.2 Sunshine Number Considered . . . 347
6 Solar Radiation Data Generation . . . 350
6.1 Computer Program . . . 352
7 Conclusions . . . 352

14 The Meteorological Radiation Model (MRM): Advancements and Applications . . . 357
Harry D. Kambezidis and Basil E. Psiloglou
1 Introduction . . . 357
2 Stages of the MRM Development . . . 358
2.1 MRM Version 1 . . . 359
2.2 MRM Version 2 . . . 362
2.3 MRM Version 3 . . . 366
2.4 MRM Version 4 . . . 368
2.5 MRM Version 5 . . . 371
3 Results and Discussion . . . 375
3.1 Clear Sky MRM . . . 376
3.2 Cloudy Sky MRM . . . 380
4 Inter-Comparison of Precipitable Water Expressions . . . 387
4.1 Gates' Formula . . . 387
4.2 Paltridge's and Platt's Relationship . . . 387

4.3 Leckner's Regression . . . 388
4.4 Perez's Relationship . . . 388
5 Conclusions . . . 389
References . . . 390

15 Chain of Algorithms to Compute Hourly Radiation Data on Inclined Planes used in Meteonorm . . . 393
Jan Remund
1 Introduction . . . 393
2 Chain of Algorithms . . . 394
2.1 Aim of the Chain . . . 394
2.2 Definition of the Meteonorm Chain . . . 394
3 Clear Sky Radiation . . . 396
4 Monthly Means of Global Radiation . . . 396
4.1 Validation . . . 397
5 Daily Values of Global Radiation . . . 397
5.1 Validation . . . 398
6 Hourly Values of Global Radiation . . . 400
6.1 Generation of Hourly Values . . . 400
6.2 Splitting the Global Radiation to Diffuse and Beam . . . 404
6.3 Radiation on Inclined Planes . . . 405
6.4 Modification of Irradiance Due to Horizon . . . 407
7 Conclusions . . . 408
