Foreword	V
<i>A. Conrad Neumann</i>	
Editors preface	XI
I Evolution and classification	1
The endolithic guild: an ecological framework for residential cavities in hard substrates	3-20
<i>Leif Tapanila</i>	
Evolutionary implications of an exceptionally preserved Carboniferous microboring assemblage in the Buckhorn Asphalt lagerstätte (Oklahoma, USA)	21-54
<i>Max Wisshak, Barbara Seuß, Alexander Nützel</i>	
Enigmatic organisms preserved in early Ordovician macroborings, western Utah, USA	55-64
<i>Jacob S. Benner, Allan A. Ekdale, Jordi M. de Gibert</i>	
II Spectrum of bioerosive biota	65
The boring microflora in modern coral reef ecosystems: a review of its roles	67-94
<i>Aline Tribollet</i>	
The trace <i>Rhopalia clavigera</i> isp. n. reflects the development of its maker <i>Eugomontia sacculata</i> Kornmann, 1960	95-108
<i>Stjepko Golubic, Gudrun Radtke</i>	
Colonisation and bioerosion of marine bivalve shells from the Baltic Sea by euendolithic cyanobacteria: an experimental study	109-122
<i>Anna M. Pawłowska, Katarzyna A. Palińska, Halina Piekarek-Jankowska</i>	
The medium is the message: imaging a complex microboring (<i>Pyrodendrina cupra</i> igen. n., isp. n.) from the early Paleozoic of Anticosti Island, Canada	123-146
<i>Leif Tapanila</i>	
Micro-computed tomography for studies on <i>Entobia</i> : transparent substrate versus modern technology	147-164
<i>Christine H. L. Schönberg, Greg Shields</i>	

A history of sponge erosion: from past myths and hypotheses to recent approaches <i>Christine H. L. Schönberg</i>	165-202
Substratum microtexture affects the boring pattern of <i>Cliona albimarginata</i> (Clionaidae, Demospongiae) <i>Barbara Calcinai, Giorgio Bavestrello, Carlo Cerrano, Laura Gaggero</i>	203-212
Two new dwarf <i>Entobia</i> ichnospecies in a diverse aphotic ichnocoenosis (Pleistocene / Rhodes, Greece) <i>Max Wisshak</i>	213-234
Borings, bodies and ghosts: spicules of the endolithic sponge <i>Aka akis</i> sp. nov. within the boring <i>Entobia cretacea</i> , Cretaceous, England <i>Richard G. Bromley, Christine H. L. Schönberg</i>	235-248
Role of polychaetes in bioerosion of coral substrates <i>Pat Hutchings</i>	249-264
<i>Parapholas quadrizonata</i> (Spengler, 1792), dominating dead-coral boring bivalve from the Maldives, Indian Ocean <i>Karl Kleemann</i>	265-278
Echinometrid sea urchins, their trophic styles and corresponding bioerosion <i>Ulla Asgaard, Richard G. Bromley</i>	279-304
III Symbiotic interactions	305
Boring a mobile domicile: an alternative to the conchicolous life habit <i>Christian Neumann, Max Wisshak, Richard G. Bromley</i>	307-328
Biogeographical distribution of <i>Hyrrokkin</i> (Rosalinidae, Foraminifera) and its host-specific morphological and textural trace variability <i>Lydia Beuck, Matthias López Correa, André Freiwald</i>	329-360
Endolithic sponge versus terebratulid brachiopod, Pleistocene, Italy: accidental symbiosis, bioclaustration and deformity <i>Richard G. Bromley, Lydia Beuck, Emma Taddei Ruggiero</i>	361-368
IV Spectrum of substrates	369
Micro-bioerosion in volcanic glass: extending the ichnofossil record to Archaean basaltic crust <i>Nicola McLoughlin, Harald Furnes, Neil R. Banerjee, Hubert Staudigel, Karlis Muehlenbachs, Maarten de Wit, Martin J. Van Kranendonk</i>	371-396

Microbial bioerosion of bone – a review <i>Miranda M. E. Jans</i>	397-414
Xylic substrates at the fossilisation barrier: oak trunks (<i>Quercus</i> sp.) in the Holocene sediments of the Labe River, Czech Republic <i>Radek Mikuláš</i>	415-430
Trace fossil assemblages on Miocene rocky shores of southern Iberia <i>Ana Santos, Eduardo Mayoral, Carlos M. da Silva, Mário Cachão, Rosa Domènech, Jordi Martinell</i>	431-450
Role of bioerosion in taphonomy: effect of predatory drillholes on preservation of mollusc shells <i>Patricia H. Kelley</i>	451-470
V Bibliography	471
An online bibliography of bioerosion references <i>Mark A. Wilson</i>	473-478
Index	479
