1	Introduction	1
1.1	Research Questions	3
1.2	Contribution and Main Results	3
1.3	Structure	5
2	Portfolio Approach to Real Options	7
2.1	Motivation of the Portfolio Approach to Real Options	7
2.1.1	Real Options and Financial Options	7
2.1.2	Definition of Portfolios of Real Options	11
2.1.3	Difference Between Financial Portfolios and Portfolios of Real Options	12
2.2	Implications for Modeling Approach	13
2.2.1	Portfolio Aspects	14
2.2.2	Management of Portfolios of Real Options	15
2.2.3	Translation into Model Features	16
3	Literature Review	21
3.1	Financial Portfolio Theory	21
3.1.1	Mean–Variance Portfolio Analysis	22
3.1.1.1	Traditional Markowitz Portfolio Selection	22
3.1.1.2	Capital Asset Pricing Model	25
3.1.1.3	Intertemporal Capital Asset Pricing Model and Consumption	26
3.1.1.4	Arbitrage Pricing Theory	27
3.1.1.5	Conclusion on Mean–Variance Portfolio Analysis	27
3.1.2	Advanced Financial Portfolio Analysis	28
3.1.2.1	Portfolio Analysis Considering Higher Moments of Distributions	28

3.1.2.2	Allowing for Frictions in the Management of Portfolios	29
3.1.2.3	Impact of Combining Financial Assets with Financial Options	29
3.1.2.4	Portfolio Implications for Risk Management .	31
3.1.2.5	Conclusion on Advanced Financial Portfolio Analysis	31
3.2	Corporate Capital Budgeting	32
3.2.1	Overview	32
3.2.2	Portfolio Perspective in Corporate Capital Budgeting .	33
3.2.3	Interdependencies	34
3.2.4	Conclusion on Corporate Capital Budgeting	36
3.3	Financial and Real Options Theory	36
3.3.1	Foundations of Real Options	36
3.3.2	Real Options Analysis in a Portfolio Context	37
3.3.3	Detailed Review of Related Papers	40
3.3.3.1	Kulatilaka (1988)	40
3.3.3.2	Kulatilaka and Trigeorgis (1994)	42
3.3.4	Conclusion on Financial and Real Options Theory	44
4	Valuation Model for Portfolios of Real Options	45
4.1	Model Features	45
4.1.1	General Assumptions	45
4.1.2	Objective Function	46
4.1.3	Managerial Actions Permitted	46
4.1.4	Risk Preference	47
4.1.5	Stochastic Processes	48
4.1.6	Volatility and Correlation	48
4.1.7	Inter- and Intra-Project Options Interactions	49
4.1.8	Global Dynamic Budgets	50
4.1.9	Synergies and Operational Constraints	52
4.1.10	Learning	52
4.1.11	Diversification as a Passive Approach to Risk Management	53
4.1.12	Path-Dependencies	53
4.1.13	Modeling Approach and Solution	54
4.1.14	Scalability	56
4.2	Binomial Option Pricing	56
4.2.1	Stochastic Processes and System State Space	56
4.2.2	Binomial Option Pricing Model with One Underlying Asset	57
4.2.3	Binomial Option Pricing Model with Two Underlying Assets	58

4.3	Real Options Portfolio Model	61
4.3.1	Switching Between Modes	61
4.3.2	Switching Formulation for One Underlying Asset	63
4.3.3	Switching Formulation for Two Underlying Assets . . .	64
4.3.4	Stochastic Mixed–Integer Program Formulation	65
4.3.4.1	One Underlying Asset	66
4.3.4.2	Two Underlying Assets	71
4.3.4.3	n –Dimensional Model Formulation	75
4.4	Model Extensions	78
4.4.1	Alternative Probability Formulation	78
4.4.2	Change of the Underlying Stochastic Processes	80
4.4.3	Explicit Modeling of Synergies	81
4.4.4	Operating and Other Constraints	82
4.4.5	Terminal Values	82
4.4.6	Further Generalizations of the Model Formulation	83
4.5	Model Discussion	83
4.5.1	Applicability of Risk–Neutral Valuation	83
4.5.2	Numerical Efficiency	84
4.5.2.1	Optimality of Solutions and Linearization	84
4.5.2.2	Dimensionality of the Problem	86
4.5.2.3	Increasing Efficiency of the Implementation	87
4.5.3	Monte Carlo Simulation	90
5	Numerical Analysis	93
5.1	Numerical Analysis for Two Underlying Assets	94
5.1.1	Numerical Application Setting for Two Underlying Assets	94
5.1.2	Overall Portfolio Effects	97
5.1.3	Budget Effects and Other Constraints	98
5.1.3.1	One Portfolio	100
5.1.3.2	Relative Attractiveness of Two Portfolios	103
5.1.3.3	Generalization of Budget Effects	105
5.1.4	Volatility Effects	106
5.1.5	Correlation Effects	109
5.1.6	Starting Value of the Underlying Assets Effects	111
5.1.7	Path–Dependency Effects	112
5.1.8	Deviations from Value Additivity	114
5.2	Extension of the Numerical Analysis to Three Underlying Assets	115
5.2.1	Numerical Application Setting for Three Underlying Assets	115
5.2.2	Correlation and Risk–Neutral Probabilities	117
5.2.3	Base Case	119

XIV Contents

5.2.4	Change in Correlation	122
5.2.5	Change in Budget	123
5.2.6	Change in Volatility	123
5.3	Numerical Summary	127
6	Conclusion	131
6.1	Summary of Results	131
6.2	Managerial Implications	135
6.3	Further Applications and Future Research	136
