Preface	IX
Acknowledgements	XI
References	XIII
1 Micromechanical experiments	1
1.1 <i>Micromechanisms of fracture in Al/SiC composites</i>	2
1.1.1 Experimental procedure	2
1.1.2 Results of experiments and analysis	3
1.2 <i>In-situ observation of damage evolution and fracture in AlSi cast alloys</i>	14
1.2.1 Failure mechanisms of ductile materials	14
1.2.2 Experimental procedure	16
1.2.3 Experimental observations	18
1.2.4 Analysis of results	23
1.3 <i>Micromechanisms of damage initiation and growth in tool steels</i>	29
1.3.1 Micromechanisms of damage initiation in tool steels	29
1.3.2 Condition of failure of primary carbides in tool steels	33
2 Micromechanical simulation of composites	37
2.1 <i>Embedded unit cells</i>	42
2.1.1 Model formulation	44
2.1.2 Systematic studies with self-consistent embedded cell models	54
2.2 <i>Multiphase finite elements</i>	65
2.2.1 3D multiphase finite element method	65
2.2.2 Multiphase finite element method and damage analysis	76
2.3 <i>Automatic generation of 3D microstructure-based finite element models</i>	89
2.3.1 Idealized microstructures of particle reinforced composites: multiparticle unit cells with spherical inclusions	89
2.3.2 Step-by-step packing approach to the 3D microstructural model generation and quasi-static analysis of elasto-plastic behavior of composites	110
3 Simulation of damage and fracture	127
3.1 <i>Crack growth in multiphase materials</i>	129
3.1.1 Failure phenomena and criteria for crack extension	129

3.1.2	Micromechanics of deformation in multiphase materials	131
3.2	<i>Ductile damage and fracture</i>	138
3.2.1	Numerical modelling of damage and fracture in Al/SiC composites: element removal method	138
3.2.2	FE analysis of fracture of WC-Co alloys: microvoid growth	144
3.2.3	Micromechanical simulation of crack growth in WC/Co using embedded unit cells	157
3.3	<i>Damage and fracture of tool steels</i>	164
3.3.1	Modeling of crack propagation in real and artificial microstructures of tool steels: simple microstructures	164
3.3.2	FE models of crack propagation tool steels: comparison of techniques and complex microstructures	184
3.4	<i>Interface fracture: elastic and plastic fracture energies of metal/ceramic joints</i>	203
3.4.1	Concept of modelling	203
3.4.2	Results	205
4	Complex, graded and interpenetrating microstructures	213
4.1	<i>Interpenetrating phase materials: matrixity model and its applications</i>	215
4.1.1	Matrixity model approach	215
4.1.2	Some applications of the matrixity model	227
4.2	<i>Graded materials: mesoscale modelling</i>	240
4.2.1	Multilayer model and functionally graded finite elements: application to the graded hardmetals	240
4.2.2	Graded multiparticle unit cells: damage analysis of metal matrix composites	248
4.2.3	Voxel-based FE mesh generation and damage analysis of composites	275
4.3	<i>Material with structure gradient for milling applications: modelling and testing</i>	299
5	Atomistic and dislocation modelling	311
5.1	<i>Embedded atom potential for Fe-Cu interactions</i>	313
5.1.1	Interatomic potentials for the pure components	314
5.1.2	Results for the Fe-Cu interaction	315
5.2	<i>Atomistic simulations of deformation and fracture of α-Fe</i>	323
5.2.1	Model and method	323
5.2.2	Results: stress-strain curves and fracture patterns	326
5.3	<i>Atomistic study of void growth in single crystalline copper</i>	342
5.3.1	Modelling approach	343
5.3.2	Results: influence of the crystal orientation of void growth	349
5.4	<i>Atomic scale modelling of edge dislocation movement in the α-Fe-Cu system</i>	363
5.4.1	The movement of an edge dislocation hitting a Cu precipitate	366

5.4.2	Derivation of dispersion strengthening from modelling	371
5.5	<i>Molecular dynamics study on low temperature brittleness in tungsten</i>	375
5.5.1	A combined model of molecular dynamics with micromechanics	377
5.5.2	Transformation from an atomistic dislocation to an elastic dislocation	379
5.5.3	Simulation of a brittle fracture process in tungsten single crystals	382
5.6	<i>Simulation of the formation of Cu-precipitates in steels</i>	395
5.6.1	Monte Carlo simulations	396
5.6.2	Simulation results: formation and growth of precipitates at different temperatures	401
5.7	<i>Atomistic simulation of the pinning of edge dislocations</i>	412
5.7.1	Molecular dynamics simulations for the analysis of the interaction of dislocations and precipitates	413
5.7.2	Determination of critical resolved shear stresses	414
	Index	419
