Contents

1 Introduction and historical remarks **1**

1.1 FAREY fractions 1
1.2 The pentagram 3
1.3 Continued fractions 6
1.4 Special square roots 8
1.5 DEDEKIND cuts 9
1.6 WEYL's alternative 12
1.7 BROUWER's alternative 13
1.8 Integration in traditional and in intuitionistic framework 15
1.9 The wager 17
1.10 How to read the following pages 19

2 Real numbers **21**

2.1 Definition of real numbers 21
2.1.1 Decimal numbers 21
2.1.2 Rounding of decimal numbers 23
2.1.3 Definition and examples of real numbers 24
2.1.4 Differences and absolute differences 26
2.2 Order relations 27
2.2.1 Definitions and criteria 27
2.2.2 Properties of the order relations 29
2.2.3 Order relations and differences 31
2.2.4 Order relations and absolute differences 32
2.2.5 Triangle inequalities 33

2.2.6 Interpolation and Dichotomy 35
2.3 Equality and apartness 38
2.3.1 Definition and criteria 38
2.3.2 Properties of equality and apartness 40
2.4 Convergent sequences of real numbers 41
2.4.1 The limit of convergent sequences 41
2.4.2 Limit and order 42
2.4.3 Limit and differences 44
2.4.4 The convergence criterion 46

3 Metric spaces **49**
3.1 Metric spaces and complete metric spaces 49
3.1.1 Definition of metric spaces 49
3.1.2 Fundamental sequences 51
3.1.3 Limit points 54
3.1.4 Apartness and equality of limit points 57
3.1.5 Sequences in metric spaces 58
3.1.6 Complete metric spaces 60
3.1.7 Rounded and sufficient approximations 61
3.2 Compact metric spaces 64
3.2.1 Bounded and totally bounded sequences 64
3.2.2 Located sequences 65
3.2.3 The infimum 67
3.2.4 The hypothesis of DEDEKIND and CANTOR 70
3.2.5 Bounded, totally bounded, and located sets 71
3.2.6 Separable and compact spaces 72
3.2.7 Bars 74
3.2.8 Bars and compact spaces 76
3.3 Topological concepts 78
3.3.1 The cover of a set 78
3.3.2 The distance between a point and a set 79
3.3.3 The neighborhood of a point 80
3.3.4 Dense and nowhere dense 82
3.3.5 Connectedness 84
3.4 The s-dimensional continuum 85
3.4.1 Metrics in the s-dimensional space 85
3.4.2 The completion of the s-dimensional space 86
3.4.3 Cells, rays, and linear subspaces 89
3.4.4 Totally bounded sets in the s-dimensional continuum . . . 90
3.4.5 The supremum and the infimum 90
3.4.6 Compact intervals 92

4 Continuous functions **95**
4.1 Pointwise continuity 95
4.1.1 The concept of function 95

4.1.2 The continuity of a function at a point 96
4.1.3 Three properties of continuity 98
4.1.4 Continuity at inner points 102
4.2 Uniform continuity 105
4.2.1 Pointwise and uniform continuity 105
4.2.2 Uniform continuity and totally boundness 107
4.2.3 Uniform continuity and connectedness 107
4.2.4 Uniform continuity on compact spaces 109
4.3 Elementary calculations in the continuum 110
4.3.1 Continuity of addition and multiplication 110
4.3.2 Continuity of the absolute value 111
4.3.3 Continuity of division 113
4.3.4 Inverse functions 115
4.4 Sequences and sets of continuous functions 118
4.4.1 Pointwise and uniform convergence 118
4.4.2 Sequences of functions defined on compact spaces 121
4.4.3 Spaces of functions defined on compact spaces 122
4.4.4 Compact spaces of functions 124

5 Literature **129**

Index **134**
